

Programmable Controller

CC-Link System Compact Type Remote I/O Module User's Manual

• SAFETY PRECAUTIONS •

(Read these precautions before using this product.)

Before using this product, please read this manual and the relevant manuals carefully and pay full attention to safety to handle the product correctly.

The precautions given in this manual are concerned with this product. For the safety precautions of the programmable controller system, refer to the user's manual for the CPU module used.

If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

In this manual, the safety precautions are classified into two levels: "⚠ WARNING " and "⚠ CAUTION".

WARNING

Indicates that incorrect handling may cause hazardous conditions, resulting in death or severe injury.

CAUTION

Indicates that incorrect handling may cause hazardous conditions, resulting in minor or moderate injury or property damage.

Under some circumstances, failure to observe the precautions given under "⚠ CAUTION" may lead to serious consequences.

Observe the precautions of both levels because they are important for personal and system safety.

Make sure that the end users read this manual and then keep the manual in a safe place for future reference.

[Design Precautions]

WARNING

- In the case of a communication failure in the network, the status of the error station will be as follows:
 - (1) All inputs from remote I/O stations are turned off.
 - (2) All outputs from remote I/O stations are turned off.Check the communication status information and configure an interlock circuit in the sequence program to ensure that the entire system will operate safely.
Incorrect output or malfunction due to a communication failure may result in an accident.
- Outputs may remain on or off due to a failure of a remote I/O module. Configure an external circuit for monitoring output signals that could cause a serious accident.

CAUTION

- Use the module in an environment that meets the general specifications in this manual.
Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product.
- Do not install the control lines or communication cables together with the main circuit lines or power cables. Doing so may result in malfunction due to electromagnetic interference. Keep a distance of 100mm or more between those cables.

[Security Precautions]

WARNING

- To maintain the security (confidentiality, integrity, and availability) of the programmable controller and the system against unauthorized access, denial-of-service (DoS) attacks, computer viruses, and other cyberattacks from external devices via the network, take appropriate measures such as firewalls, virtual private networks (VPNs), and antivirus solutions.

[Installation Precautions]

CAUTION

- Do not directly touch any conductive parts of the module. Doing so can cause malfunction or failure of the module.
- Securely fix the module with a DIN rail or mounting screws. Tighten the screws within the specified torque range. Undertightening can cause drop of the screw, short circuit or malfunction. Overtightening can damage the screw and/or module, resulting in drop, short circuit, or malfunction.
- Securely connect the cable connectors. Poor contact may cause malfunction.

[Wiring Precautions]

WARNING

- Shut off the external power supply for the system in all phases before wiring.
Failure to do so may result in electric shock or cause the module to fail or malfunction.

CAUTION

- Individually ground the FG terminal of the programmable controller with a ground resistance of 100Ω or less. Failure to do so may result in electric shock or malfunction.
- Tighten any unused terminal screws within the specified torque range (0.42 to 0.50N•m). Failure to do so may cause a short circuit due to contact with a solderless terminal.
- Use applicable solderless terminals and tighten them within the specified torque range. If any spade solderless terminal is used, it may be disconnected when the terminal screw comes loose, resulting in failure.
- Check the rated voltage and terminal layout before wiring to the module, and connect the cables correctly. Connecting a power supply with a different voltage rating or incorrect wiring may cause a fire or failure.
- Tighten the terminal screw within the specified torque range. Undertightening can cause short circuit, fire, or malfunction. Overtightening can damage the screw and/ or module, resulting in drop, short circuit, fire, or malfunction.
- When fixing the CC-Link dedicated cable and the power cable through the pipes for transmission or power supply line of the waterproof type remote I/O module, securely tighten the nuts with a wrench. Undertightening can cause water intrusion, resulting in failure. (AJ65SBTW□-16□ only.)

[Wiring Precautions]

CAUTION

- Tighten the communication adapter mounting screw or the waterproof cap within the specified torque range. Undertightening can cause short circuit, fire, or malfunction. Overtightening can damage the screw or the cap, resulting in short circuit or malfunction. (AJ65FBTA□-16□ only.)
- This product meets IP67 standard under the condition that the waterproof plugs, waterproof caps, and communication adapter are all installed. (AJ65FBTA□-16□ only.)
- Do not connect the cable to an incorrect connector. The I/O connector, communication connector, and power connector have the same interface. Doing so can cause malfunction or failure of the module. (AJ65FBTA□-16□ only.)
- When wiring, shield the module using a cover or similar means to prevent foreign matter such as dust or wire chips from entering the module. Such foreign matter can cause a fire, failure, or malfunction. Remove the shield for heat dissipation before operating the system.
- Place the cables in a duct or clamp them. If not, dangling cables may swing or inadvertently be pulled, resulting in malfunction or damage to modules or cables. In addition, the weight of the cables may put stress on modules in an environment of strong vibrations and shocks.
- Do not install the control lines together with the communication cables, or bring them close to each other. Failure to do so may cause malfunctions due to noise.
- When an overcurrent caused by an error of an external device or a failure of the programmable controller flows for a long time, it may cause smoke and fire. To prevent this, configure an external safety circuit, such as a fuse.
- When disconnecting the cable from the module, do not pull the cable by the cable part. For the cable with connector, hold the connector part of the cable. For the cable connected to the terminal block, loosen the terminal screw. Pulling the cable connected to the module may result in malfunction or damage to the module or cable.

[Starting and Maintenance Precautions]

WARNING

- Do not touch any terminal while power is on. Doing so will cause electric shock or malfunction.
- Shut off the external power supply for the system in all phases before cleaning the module, retightening the terminal screws or module mounting screws, or operating the station number setting switch, transmission speed setting switch, or input response speed switch. Failure to do so may cause the module to fail or malfunction.
- Set the sink/source selector switch after shutting off the power supply at all phases. Failure to do so may result in failures or malfunctions in the opponent device.

CAUTION

- Do not disassemble or modify the modules. Doing so may cause failure, malfunction, injury, or a fire.
- Do not drop or apply strong shock to the module. Doing so may damage the module.
- Shut off the external power supply for the system in all phases before mounting or removing a module. Failure to do so may cause the module to fail or malfunction.
- After the first use of the product, do not mount/remove the terminal block to/from the module more than 50 times (compliant with IEC 61131-2 and JIS B 3502).
- Before handling the module, touch a conducting object such as a grounded metal to discharge the static electricity from the human body. Wearing a grounded antistatic wrist strap is recommended. Failure to do so may cause the module to fail or malfunction.
For details on the safety precautions concerning the electrostatic discharge, check the standards of IEC 61340-5-1 and IEC 61340-5-2.
- After unpacking, eliminate static electricity from the module to prevent electrostatic discharge from affecting the module. If an electrostatically charged module comes in contact with a grounded metal object, a sudden electrostatic discharge of the module may cause failure.
- Use a clean and dry cloth to wipe off dirt on the module.

[Disposal Precautions]

CAUTION

- When disposing of this product, treat it as industrial waste.

• CONDITIONS OF USE FOR THE PRODUCT •

(1) MELSEC programmable controller ("the PRODUCT") shall be used in conditions;

- i) where any problem, fault or failure occurring in the PRODUCT, if any, shall not lead to any major or serious accident; and
- ii) where the backup and fail-safe function are systematically or automatically provided outside of the PRODUCT for the case of any problem, fault or failure occurring in the PRODUCT.

(2) The PRODUCT has been designed and manufactured for the purpose of being used in general industries.

MITSUBISHI ELECTRIC SHALL HAVE NO RESPONSIBILITY OR LIABILITY (INCLUDING, BUT NOT LIMITED TO ANY AND ALL RESPONSIBILITY OR LIABILITY BASED ON CONTRACT, WARRANTY, TORT, PRODUCT LIABILITY) FOR ANY INJURY OR DEATH TO PERSONS OR LOSS OR DAMAGE TO PROPERTY CAUSED BY the PRODUCT THAT ARE OPERATED OR USED IN APPLICATION NOT INTENDED OR EXCLUDED BY INSTRUCTIONS, PRECAUTIONS, OR WARNING CONTAINED IN MITSUBISHI ELECTRIC USER'S, INSTRUCTION AND/OR SAFETY MANUALS, TECHNICAL BULLETINS AND GUIDELINES FOR the PRODUCT.

("Prohibited Application")

Prohibited Applications include, but not limited to, the use of the PRODUCT in;

- Nuclear Power Plants and any other power plants operated by Power companies, and/or any other cases in which the public could be affected if any problem or fault occurs in the PRODUCT.
- Railway companies or Public service purposes, and/or any other cases in which establishment of a special quality assurance system is required by the Purchaser or End User.
- Aircraft or Aerospace, Medical applications, Train equipment, transport equipment such as Elevator and Escalator, Incineration and Fuel devices, Vehicles, Manned transportation, Equipment for Recreation and Amusement, and Safety devices, handling of Nuclear or Hazardous Materials or Chemicals, Mining and Drilling, and/or other applications where there is a significant risk of injury to the public or property.

Notwithstanding the above restrictions, Mitsubishi Electric may in its sole discretion, authorize use of the PRODUCT in one or more of the Prohibited Applications, provided that the usage of the PRODUCT is limited only for the specific applications agreed to by Mitsubishi Electric and provided further that no special quality assurance or fail-safe, redundant or other safety features which exceed the general specifications of the PRODUCTS are required. For details, please contact the Mitsubishi Electric representative in your region.

(3) Mitsubishi Electric shall have no responsibility or liability for any problems involving programmable controller trouble and system trouble caused by DoS attacks, unauthorized access, computer viruses, and other cyberattacks.

INTRODUCTION

Thank you for purchasing the Mitsubishi Electric MELSEC-A series programmable controllers.
Before using this product, please read this manual carefully and develop familiarity with the functions and performance of the MELSEC-A series programmable controller to handle the product correctly.
Make sure that the end users read this manual.

COMPLIANCE WITH EMC AND LOW VOLTAGE DIRECTIVES

(1) Method of ensuring compliance

To ensure that Mitsubishi Electric programmable controllers maintain EMC and Low Voltage Directives when incorporated into other machinery or equipment, certain measures may be necessary. Please refer to one of the following manuals.

- User's manual for the CPU module or head module used
- Safety Guidelines

(This manual is included with the CPU module, base unit, or head module.)

The CE mark on the side of the programmable controller indicates compliance with EMC and Low Voltage Directives.

(2) Additional measures

To ensure that this product maintains EMC and Low Voltage Directives, please refer to one of the manuals listed under (1).

1 OVERVIEW

1

This manual describes the specifications of the compact remote I/O module (hereinafter referred to as the "compact remote I/O module") used as the remote I/O station of the CC-Link system.

1.1 Features

The following are the features of the compact remote I/O module:

- (1) The remote I/O module is reduced in size yet retains all the functions of the conventional module

The conventional remote I/O module has furthermore been reduced in size.
[External dimension (comparative example)]

- (2) More models in the compact remote I/O module lineup

The compact remote I/O modules for the CC-Link system is divided into six types including terminal block type, one-touch connector type, waterproof-type, FCN connector type, spring clamp terminal block type, and sensor connector (e-CON) type.

In addition, the number of I/O points is divided into three types (8 points, 16 points, and 32 points), allowing the user to select a module that is most appropriate for the environment and objective.

- (3) 4-wire compact remote I/O module featuring easy connection of a 4-wire sensor

A 4-wire sensor can be easily connected via the common pin provided on each plug without installing a relay terminal block.

For a 4-wire compact remote I/O module, one sensor is connected to each plug. Therefore, sensors can be exchanged by plug, reducing work steps.

- (4) Terminal block connection provides easy connection of 2-wire and 3-wire sensors or loads

Since the terminal block connection allows connection of 2-wire and 3-wire sensors or loads, common connections are not needed and it makes connection easier.

(5) Wiring work can be minimized

- (a) Terminal-block module
The number of wiring steps can be dramatically reduced by adopting the use of self-tightening screws on the terminal block.
- (b) One-touch connector module, connector module
The number of wiring steps can be dramatically reduced by adopting use of the pressure-displacement wire-connection method (soldering, peeling of shield and screwing not necessary).
- (c) FCN connector module
The number of wiring steps can be dramatically reduced by adopting 40-pin connector for I/O part.
- (d) Spring clamp terminal block module
The number of wiring steps can be dramatically reduced by adopting spring clamps (screwing not necessary).

(6) Waterproof remote I/O modules with improved resistance against water and oil

The waterproof remote I/O module, low profile waterproof remote I/O module adopts a protection structure compatible with IP67, providing even safer usage in areas in which water and oil are present.

- (7) Up to a maximum of 64 remote I/O modules can be connected
In the CC-Link system, a maximum of 64 remote I/O modules can be connected per master station.
Since each remote I/O module occupies 32 points, a maximum of 2048 link points can be set.
- (8) Modules can be exchanged without stopping the CC-Link system
With the adoption of a two-piece terminal block for the CC-Link cable connection, modules may be exchanged without stopping the CC-Link system.
- (9) Direct installation to the machine is feasible
The terminal-block remote I/O module may be installed directly to the machine, since the charged area is protected by a finger protector in the upper area of the terminal block.
- (10) The module can be installed in six orientations
The compact remote I/O module can be installed in six different orientations. (Restrictions may apply to some installation orientations.)
The module can also be installed using the DIN rail.

- (11) Transistor output module with improved protection functions
The transistor output module is designed to achieve an even greater degree of module protection by adopting overload protection, overheat protection and overvoltage protection as standard. As a result, the programmable controller system's reliability is further improved.

1.2 Identifying the Compact Remote I/O Module Type

The following shows how to identify the type of a compact remote I/O module:

1.3 Precautions for use of remote I/O modules

This section describes the precautions for use of remote I/O modules applicable in the CC-Link system and their specifications.

- This is a remote I/O module designed specifically for the CC-Link system.
Do not connect the module to other data-link systems, such as the MELSECNET/MINI.
- 32 points are assigned per station for a compact remote I/O module.
For 16-point modules the 16 points in the second half and for 8-points module the 24 points in the second half remain empty but are not usable.
- Do not install the main circuit lines, high-voltage cables, and load cables other than those connected to the programmable controller together.
If doing so, the remote I/O module (especially, AJ65SBTB1-16D1, AJ65SBTB1-32D1, AJ65VBTCU3-8D1, AJ65VBTCU3-16D1, and AJ65SBTC1-32D1) will be susceptible to noise, surge, and induction.
- When a mechanical contact, such as a relay, is connected to the AJ65SBTB1-16D1, AJ65SBTB1-32D1, AJ65VBTCU3-8D1, AJ65VBTCU3-16D1, or AJ65SBTC1-32D1, chattering may be input as a signal.

1.3.1 Input module

(1) Input response time and pulse width

The input module may take noise for inputs due to the signal pulse width.

The pulse width of the AJ65SBTB1-32KD□, AJ65SBTB3-16KD□, or AJ65SBTB32-16KD□ is as shown in the following table depending on the response speed set by the input response speed switching switch. In case of setting the response speed, fully consider the operating environment.

Response speed setting value (ms)	Minimum value of pulse width that can take noise for inputs (ms)
0.2	0.006
1.5	0.8
5	3
10	6

When setting “0.2ms” as the response speed under an environment with noise, an input signal line (including a common line) should be 3m or less.

(2) Precautions when using the DC input module

(a) Measures against back EMF

When an inductive load is connected, connect a diode to the load in parallel. Use a diode that meets the following conditions.

- Reverse breakdown voltage is equal to or more than 10 times as large as the circuit voltage.
- Forward current is equal to or more than 2 times as large as the load current.

(3) Precautions when using the AJ65SBTC1-32D or AJ65SBTC1-32D1

The maximum number of simultaneous input points of the AJ65SBTC1-32D or AJ65SBTC1-32D1 varies depending on the ambient temperature. Refer to the derating curve below

(10) Precautions when using the AJ65SBTB1-32KD or AJ65SBTB1-32KDT2

The maximum number of simultaneous input points of the AJ65SBTB1-32KD or AJ65SBTB1-32KDT2 changes according to the input voltage and ambient temperature.

If the input voltage is higher than 26.4V, the maximum number of simultaneous input points is as shown in the following figures.

(If the input voltage is 26.4V or lower, derating is not required.)

(11) Precautions when using a 3-wire or 4-wire module

When supplying power from a 3-wire or 4-wire module to an external device, such as a sensor, total current must be equal to or less than the value of "supply current for connected device" specified for the module.

1.3.2 Output module

(1) Maximum switching frequency when the module drives inductive load

The output must be on for one second or longer and off for one second or longer.

(2) Load for connection

When connecting a counter or timer that has a DC-DC converter to a transistor output module (maximum load current 0.1A) as a load, select an output module whose maximum load current is larger than inrush current of the load.

Selecting an output module by average current of the load may cause a failure of the module because inrush current flows at a constant frequency at power-on or during operation due to the connected load.

If an output module needs to be selected by average current of the load, take either of the following actions to reduce an influence from inrush current.

- Connecting a resistor to the load in series

- Connecting an inductor to the load in series

(3) Precaution for using the transistor output module

(a) Action against reverse current

If a transistor output module is wired as shown below, reverse current flows in an output element, causing a failure of the element.

When wiring a transistor output module, connect a diode as shown below.

- When connecting transistor output modules in parallel

Sink type

Source type

- When incorporating an additional circuit parallel to a transistor output module

(b) Measures against back EMF

When an inductive load is connected, connect a diode to the load in parallel. Use a diode that meets the following conditions.

- Reverse breakdown voltage is equal to or more than 10 times as large as the circuit voltage.
- Forward current is equal to or more than 2 times as large as the load current.

(4) Modules that require an external short-circuit protection circuit

The following modules have no short-circuit protection function. Configure a short-circuit protection circuit external to the programmable controller when they are used.

| • AJ65SBTC1-32DT3 | | | |

(5) Precautions when using a 3-wire module

When supplying power from a 3-wire module to an external device, such as a sensor, the total current value must be equal to or less than the value of "supply current for connected device" specified for the module.

(6) Precautions for using the contact output module

When using the contact output module, consider the following.

- Relay life
- Effects to relay life due to connected load
- Measures against back EMF

(a) Relay life

Applicable module: AJ65SBTB2N-8R, AJ65SBTB2N-16R,
AJ65DBTB1-32R, AJ65DBTB1-32DR

The relay life depends on the operating environment. Select a module according to the operating environment. The relay lives shown below are the actual service values, not the guaranteed values. Replace the module well in advance since the actual switching life may be shorter than the one shown below.

Operating environment	Switching life
Rated switching voltage/current, rated load	100 thousand times
200VAC 1.5A, 240VAC 1A ($\cos \phi = 0.7$)	100 thousand times
200VAC 1A, 240VAC 0.5A ($\cos \phi = 0.35$)	100 thousand times
24VDC 1A, 100VDC 0.1A ($L/R=7\text{ms}$)	100 thousand times

POINT

When using the module for the application in which the relay contact is frequently switched, the relay life span should be considered. Therefore, it is recommended to use a triac output module.

(b) Effects to relay life due to connected load

The actual relay life may be significantly shortened compared to the one shown above, depending on the type of a load connected and the characteristics of inrush current.

Also, the inrush current may cause contact welding.

Take the following measures to prevent shortening of the relay life and the contact welding.

- Select a load so that the inrush current will be within the rated current of the module.
- Connect an external relay that can withstand the inrush current.

The following table shows the relation between the load and the inrush current. Select a load so that the inrush current (i) and the rated current (i_o) will be within the rated switching current specified for the output module used.

The inrush current may flow for a longer time depending on the load.

Load type	Signal waveform diagram	Inrush current (i)/rated current (i_o)	Signal waveform diagram	Inrush current (i)/rated current (i_o)
Inductive load	Load of a solenoid  0.07 to 0.1 seconds i : Inrush current i_o : Rated current	Approx. 10 to 20 times	Load of an electromagnetic contactor  0.017 to 0.033 seconds (1 to 2 cycles) i : Inrush current i_o : Rated current	Approx. 3 to 10 times
Lamp load	Load of an incandescent bulb  Approx. 0.33 seconds i : Inrush current i_o : Rated current	Approx. 3 to 10 times	Load of a mercury lamp  180 to 300 seconds (3 to 5 minutes) i : Inrush current i_o : Rated current	Approx. 3 times ^{*1}
	Load of a fluorescent  Within 10 seconds i : Inrush current i_o : Rated current		—	
Capacitive load	Capacitive load ^{*2}  0.008 to 0.33 seconds (0.5 to 2 cycles) i : Inrush current i_o : Rated current	Approx. 20 to 40 times	—	—

(c) Measures against back EMF

Configure a contact protection circuit for extending the contact life, preventing noise when the contact is cut off, and suppressing the generation of carbide and nitric acid due to arc discharge.

An Incorrect contact protection circuit may cause contact welding.

Also, when using the contact protection circuit, the recovery time may be long.

The following table shows the representative examples of the contact protection circuit.

Circuit example	Method for selecting elements	Remarks
Capacitor + Resistor method (CR method) 	Refer to the following for constants of the capacitor and resistor. Note that the following values may differ depending on a nature of the load and a variation of characteristics of it. <ul style="list-style-type: none"> • Capacitor 0.5 to 1 (μF) against contact current of 1A • Resistor 0.5 to 1 (Ω) against contact voltage of 1V Use a capacitor whose withstand voltage is 200 to 300V. In AC circuit, use a capacitor having no polarity.	If a load is from a relay or solenoid, the recovery time delays. A capacitor suppresses electric discharge while a contact is off, and a resistor restricts a flow of current while a contact is on.
Diode method 	Use a diode that meets both conditions shown below. <ul style="list-style-type: none"> • Reverse breakdown voltage is equal to or more than 10 times as large as the circuit voltage. • The forward current is equal to or more than 2 times as large as the load current. 	The recovery time is later than the CR method.
Diode + Zener diode method 	Use zener voltage for the zener diode equal to or more than the power supply voltage.	The diode method is effective when the recovery time is too late.

*1: When using AC power, impedance of CR must be larger enough than that of the load. (prevention of a malfunction due to leak current from the CR)

(To the next page)

Circuit example	Method for selecting elements	Remarks
Varistor method 	Select a cut voltage (V_c) for the varistor to meet the following condition. • $V_c > \text{power voltage} \times 1.5(\text{V})$ • $V_c > \text{power voltage} \times 1.5(\text{V}) \times \sqrt{2}$ (When using AC power) This method is not effective when the V_c is too high	The recovery time delays slightly.

POINT

- (1) Avoid providing contact protection circuits shown below.

These circuits are effective for preventing an arc at shut-off. However, the contact welding may occur because the charge current flows to capacitor when the contact turns on or off.

A DC inductive load is usually harder for switching than a resistor load, but if a proper protection circuit is configured, the performance will be similar to the resistor load.

- (2) A protection circuit must be provided closely to a load or contact (module). If their distance is far, the protection circuit may not be effective. Appropriate distance is within 50cm.

- (7) Precautions for using the triac output module

Because of characteristics of a triac, a sudden change of voltage or current may cause unstable operations of a triac used for the triac output module.

Whether the voltage or current change causes a problem differs depending on an individual part (each triac), thus check the following when using the triac output module.

- (a) Checking of the load current

When the current consumption is equal to or smaller than the minimum load current and the margin is low by using an inductive load such as a solenoid valve, a triac may not turn on or off properly. In that case, an action such as connecting a bleeder resistance is required.

For detail on actions, refer to Section 8.2.2.

- (b) Precautions on a full-wave rectifier load

The load current of a full-wave rectifier load forms waves similar to rectangular waves as shown below.

A triac may not operate properly if the current forms rectangular waves associated with sudden current changes. To avoid it, use a load with which the load current does not form rectangular waves.

(c) Measures for connecting an inductive load

To connect an inductive load, take measures to reduce noise to the side where the load is connected as shown below.

Circuit example	Method for selecting elements	Remarks
Varistor method 	Select a cut voltage (V_c) for the varistor to meet the following condition. • $V_c > \text{Power supply voltage} \times 1.5(V) \times \sqrt{2}$ This method is not effective when the V_c is too high.	The recovery time delays slightly.
Capacitor + Resistor method (CR method) 	Refer to the following for constants of the capacitor and resistor. Note that the following values may differ depending on a nature of the load and a variation of characteristics of it. • Capacitor: 0.5 to 1 (μF) against load current of 1A • Resistor: 0.5 to 1(Ω) against power supply voltage of 1V Use a capacitor whose withstand voltage is equal to or more than the rated voltage. Use a capacitor having no polarity.	If a load is from a relay or solenoid, the recovery time delays.

(d) Measures for connecting an inductive load (when installing a contact between the load and the output terminal)

To install a contact (such as an interlock) between the load and the output terminal, take measures to reduce noise as shown below.

Though measures (varistor method, capacitor + resistor method) are normally taken to the load side, in some cases, it is more efficient to take the measures to the module side considering the contact effect.

	Circuit example	Method for selecting elements	Remarks
Varistor method	<p>• Measure taken to the load side</p>  <p>• Measure taken to the module side</p> 	<p>Select a cut voltage (V_c) for the varistor to meet the following condition.</p> <ul style="list-style-type: none"> • $V_c > \text{Power supply voltage} \times 1.5(V) \times \sqrt{2}$ <p>This method is not effective when the V_c is too high.</p>	<p>The recovery time delays slightly.</p>

1.3.3 Modules with protection functions

This section describes the protection functions of the following modules.

- (1) Modules with overload protection function, overvoltage protection function, and overheat protection function

AJ65FBTA2-16TE, AJ65FBTA42-16DTE The overload protection function is automatically reset when the load current drops to the rated value.
Overvoltage protection function	<ol style="list-style-type: none"> This function protects elements from an abrupt surge caused when a coil load is used.

Function	Description
Overheat protection function	<ol style="list-style-type: none">1. When the overheat protection function is activated, the output is off. If an overheat state persists, the heat may transfer to the printed circuit board, potentially activating the overheat protection function of another output.2. If this function is activated while an output signal is on, the voltage oscillates between 0V and the load voltage. When the load voltage is 24VDC, the average voltage during oscillation is approximately 7VDC. (The voltage does not oscillate when an output signal is off.) To ensure that output turns off when the overheat protection function becomes activated, use an external load that turns off at higher than 7VDC under overheat condition.3. The overheat protection function is automatically reset when the temperature falls below the pre-set value.

*1: The limiter is a function that limits an overcurrent to a certain current value to keep it flowing.

1.6 Recommended Connection Device List

1.6.1 Recommended connection devices for low profile waterproof remote I/O module

The following shows communication devices needed for use of the low profile waterproof type remote I/O module (AJ65FBTA□-16□).

(1) Communications Module Waterproof Plug (Male / Female) . . . 4-pin / 5-pin can be used.

(a) For LINK In Side (Female)

Model name	Maker	Specifications	Connection cable diameter
ELKA 4012 PG9	HIRSCHMANN	M12-4-pin Female Straight Type	φ6.0 to 8.0mm
ELKA 5012 PG9	HIRSCHMANN	M12-5-pin Female Straight Type	φ6.0 to 8.0mm
CM02A-8DP5S(03)	Fujikura Ltd.	M12-4-pin Female Straight Type	φ7.2 to 7.9mm
ELWIKA 4012 PG9	HIRSCHMANN	M12-4-pin Female Right-angle Type	φ6.0 to 8.0mm
ELWIKA 5012 PG9	HIRSCHMANN	M12-5-pin Female Right-angle Type	φ6.0 to 8.0mm

(b) For LINK OUT Side (Male)

Model name	Maker	Specifications	Connection cable diameter
ELST 4012 PG9	HIRSCHMANN	M12-4-pin Male Straight Type	φ6.0 to 8.0mm
ELST 5012 PG9	HIRSCHMANN	M12-5-pin Male Straight Type	φ6.0 to 8.0mm
CM02A-8DJ5P(03)	Fujikura Ltd.	M12-4-pin Female Straight Type	φ7.2 to 7.9mm
ELWIST 4012 PG9	HIRSCHMANN	M12-4-pin Male Right-angle Type	φ6.0 to 8.0mm
ELWIST 5012 PG9	HIRSCHMANN	M12-5-pin Male Right-angle Type	φ6.0 to 8.0mm

(2) Power Supply Module - Waterproof Plug (Female) . . . 5-pin only can be used.

Model name	Maker	Specifications	Connection cable diameter
ELKA 5012 PG7	HIRSCHMANN	M12-5-pin Female Straight Type	φ4.0 to 6.0mm
ELKA 5012 PG9			φ6.0 to 8.0mm
ELWIKA 5012 PG7	HIRSCHMANN	M12-5-pin Female Right-angle Type	φ4.0 to 6.0mm
ELWIKA 5012 PG9			φ6.0 to 8.0mm

(3) I/O connector waterproof plug (male) . . . 4-pin/5-pin can be used.
The plug for LINK OUT side (male) mentioned in Section (1) (b) can be used.

(4) I/O Connector Y Branch Connector

Model name	Maker	Remarks
SAC-3P-M12Y	PHOENIX CONTACT GmbH & Co. KG	—
SAC-5P-M12Y		
XS2R series	OMRON Corporation	—
VA-4YG-2	CORRENS Corporation	—

(5) CC-Link Cable

Model name	Maker	Remarks
FA-CBL series	MITSUBISHI ELECTRIC ENGINEERING Co.,Ltd	CC-Link dedicated cable with waterproof connector
Cable with M12 Connector	Shinwa Co.,Ltd	The CA series cannot be used.

1.6.2 Recommended connection devices for low profile sensor connector (e-CON) remote I/O module

The following shows communication devices needed for use of the sensor connector (e-CON) remote I/O module (AJ65VBTCE□-□□).

For how to wire the sensor connector (e-CON), refer to the catalog of the corresponding maker.

(1) I/O sensor connector (e-CON) plug *1

Model name	Maker	Specifications			Color of the cover
		Applicable cable size (core)	Applicable cable size (diameter)	Maximum rated current	
ECN-A014R	(Mitsubishi Electric System Service Co., Ltd.)	0.08 to 0.20mm ² (28 to 24 AWG)	φ0.9 to 1.0mm	2A * 2	Red
ECN-A004Y		0.20 to 0.30mm ² (24 to 22 AWG)	φ1.0 to 1.15mm		Yellow
ECN-A024BL		0.30 to 0.50mm ² (22 to 20 AWG)	φ1.15 to 1.3mm		Blue
ECN-M014R		0.14 to 0.30mm ² (26 to 24 AWG)	φ0.8 to 1.0mm		Red
ECN-M024Y			φ1.0 to 1.2mm		Yellow
ECN-M034OR			φ1.2 to 1.6mm		Orange
ECN-M044GN		0.30 to 0.50mm ² (22 to 20 AWG)	φ1.0 to 1.2mm		Green
ECN-M054BL			φ1.2 to 1.6mm		Blue
ECN-M064GY			φ1.6 to 2.0mm		Gray

*1 The ECN-□□□□ is available in packs of 20 pieces.

*2 Keep the current within the allowable range of the connected cable.

1.7 About the Generic, Abbreviated and Technical Terms Used in This Manual

The abbreviated and technical terms used in this manual are listed below:

Generic/abbreviated/ technical term	Description
Master/local module	Generic term for the AJ61BT11, A1SJ61BT11, AJ61QBT11, A1SJ61QBT11, QJ61BT11, QJ61BT11N, L26CPU-BT, L26CPU-PBT, LJ61BT11, and RJ61BT11 CC-Link system master/local modules
Compact remote I/O module	Generic term for the AJ65SBT□□-□□ CC-Link system compact remote I/O modules
Conventional remote I/O module	Generic term for the AJ65BT□□-□□ CC-Link system remote I/O modules

5)	Station number setting switch	Set the station number within the range of 1 to 64.*1 • Use "×10" for the tens place. • Use "×1" for the ones place.																						
6)	Indication selector switch*3	When the switch is set to "X0-XF", LEDs indicate the ON/OFF status of X0 to XF. When the switch is set to "X10-X1F", LEDs indicate the ON/OFF status of X10 to X1F.																						
7)	Sink/source switch (For AJ65SBTC1-16D only)	Switches the input type (sink or source). Open the module top cover to set the switch. <div style="text-align: center;"><div><When setting for sink type></div><div><div>SOURCE</div><div></div><div>SINK</div></div><div>Switch</div><div><div>SOURCE</div><div></div><div>SINK</div></div><div><When setting for source type></div></div>

9)	Terminal block	Terminal block for module power supply, transmission, and I/O signals.																						
10)	Connector	Connector for I/O signals.																						
11)	DIN rail hook	When mounting the module to a DIN rail, push in the DIN rail hook until it clicks.																						
12)	Switch cover	The cover is designed to prevent unintended contact with the switches and to keep out dirt and dust. Close the cover when the switches are not in use, such as during power-on.																						

*1 A unique station number should be set.

*2 The switch setting is applied and held when the power is turned on.
 Therefore, make any changes to the setting after turning off the power.

*3 Use your fingertip to adjust the indication selector switch. Avoid using tools such as screwdrivers, as they may damage the switch.

4)	Indication selector switch ^{*2}	When the switch is set to "X0-XF", LEDs indicate the ON/OFF status of X0 to XF. When the switch is set to "Y10-Y1F", LEDs indicate the ON/OFF status of Y10 to Y1F.
5)	Connector for communication	One-touch connector for communication line. When carrying out wiring, connect two optional one-touch connector plugs for communication (A6CON-L5P) at top and bottom. When changing the module online, connect the optional online connectors (A6CON-LJ5P) between the connector and plugs. When the module is used at either end of the CC-Link system, attach an optional one-touch connector plug with terminating resistor (110Ω) (A6CON-TR11(N)).
6)	Connector for power supply and FG	One-touch connector for module power supply line, I/O power supply line, and FG. When carrying out jumper wiring, connect two optional one-touch connector plugs for power supply and FG at top and bottom. Two different types (A6CON-PW5P, A6CON-PW5P-SOD) are available as the one-touch connector plugs for power supply and FG. When not carrying out jumper wiring, also connect the plugs (for safety and dust prevention). When changing the module online, connect the optional online connectors (A6CON-PWJ5P) between the connector and plugs.
7)	Connector	Connector for I/O signals.
8)	DIN rail hook	Hook to install the module to the DIN rail or connector type Metal installation fitting (option). When mounting the module to a DIN rail, push in the DIN rail hook until it clicks.

*2 To operate the indication selector switch, do not use a tool such as a screwdriver. Doing so may damage the switch.

4)	Indication selector switch*2	When the switch is set to "F", LEDs indicate the ON/OFF status of the first 16 points. When the switch is set to "L", LEDs indicate the ON/OFF status of the latter 16 points.
5)	Connector for communication	One-touch connector for communication line. When carrying out wiring, connect two optional one-touch connector plugs for communication (A6CON-L5P) at top and bottom. When changing the module online, connect the optional online connectors (A6CON-LJ5P) between the connector and plugs. When the module is used at either end of the CC-Link system, attach an optional one-touch connector plug with terminating resistor (110Ω) (A6CON-TR11(N)).
6)	Connector for power supply and FG	One-touch connector for module power supply line, and FG. When carrying out jumper wiring, connect two optional one-touch connector plugs for power supply and FG at top and bottom. Two different types (A6CON-PW5P, A6CON-PW5P-SOD) are available as the one-touch connector plugs for power supply and FG. When not carrying out jumper wiring, also connect the plugs (for safety and dust prevention). When changing the module online, connect the optional online connectors (A6CON-PWJ5P) between the connector and plugs.
7)	2-piece spring clamp terminal block	2-piece terminal block for I/O signals.
8)	DIN rail hook	Hook to install the module to the DIN rail or connector type Metal installation fitting (option). When mounting the module to a DIN rail, push in the DIN rail hook until it clicks.
9) 10)	Mounting bracket (accessory)	Used to install the module to a control panel.

*2 To operate the indication selector switch, do not use a tool such as a screwdriver. Doing so may damage the switch.

3 GENERAL SPECIFICATIONS

The following table lists the general specifications of the compact type remote I/O module.

Item	Specifications					
Operating ambient temperature	0 to 55°C * ⁶					
Storage ambient temperature	-20 to 75°C * ⁶					
Operating ambient humidity	10 to 90% RH, non-condensing (The waterproof type remote I/O module is compliant with IP67. * ⁴)					
Storage ambient humidity	10 to 90% RH, non-condensing					
Vibration resistance		Frequency	Constant acceleration	Half amplitude	Sweep count	IEC 61131-2:2007 /JIS B 3502:2011
	Under intermittent vibration	5 to 8.4Hz	—	3.5mm	10 times each in X, Y, Z directions	
		8.4 to 150Hz	9.8m/s ²	—		
	Under continuous vibration	5 to 8.4Hz	—	1.75mm	—	
		8.4 to 150Hz	4.9m/s ²	—		
Shock resistance	Three shocks in each direction per axis, on 3 mutually perpendicular axes (total of 18 shocks)					
Operating atmosphere	No corrosive gases					
Operating altitude * ³	0 to 2000m					
Installation location	Inside a control panel * ⁵					
Overvoltage category * ¹	II or less					
Pollution degree * ²	2 or less					

- *¹ This indicates the section of the power supply to which the equipment is assumed to be connected between the public electrical power distribution network and the machinery within premises.
Category II applies to equipment for which electrical power is supplied from fixed facilities.
The surge voltage withstand level for up to the rated voltage of 300V is 2500V.
- *² This index indicates the degree to which conductive material is generated in terms of the environment in which the equipment is used.
Pollution level 2 is when only non-conductive pollution occurs. A temporary conductivity caused by condensing must be expected occasionally.
- *³ Do not use or store the programmable controller under pressure higher than the atmospheric pressure of altitude 0m. Doing so may cause malfunction. When using the programmable controller under pressure, please consult your local Mitsubishi representative.
- *⁴ This applies only when all waterproof connectors are being used or when waterproof caps are attached to unused waterproof connectors or pipes. (Only the AJ65SBTW□-16□ has pipes.)
- *⁵ The module can be used in an environment other than inside a control panel if the conditions such as the operating ambient temperature and humidity are satisfied.
- *⁶ For the waterproof type remote I/O module (AJ65SBTW□-16□ only), the operating ambient temperature and storage ambient temperature will be as follows.

Item	Specifications	
Operating ambient temperature	0 to 45°C	
Storage ambient temperature	Not wired (individual product)	-20 to 65°C
	Wired (after cable installation)	-10 to 55°C

REMARK

To ensure that the product maintains EMC and Low Voltage Directives, certain measures may be necessary. Please refer to the user's manual for the CPU module used.

4 SPECIFICATIONS FOR INPUT MODULES

This chapter describes the specifications for an input module that can be connected to the CC-Link system.

4.1 Terminal Block Type Input Module

4.1.1 AJ65SBTB2N-8A 100VAC input module

Type		AC input module	
Item		AJ65SBTB2N-8A	Appearance
Number of input points		8 points	
Isolation method		Photocoupler	
Rated input voltage/rated frequency		100 to 120VAC (ripple ratio: within 5%), 50/60Hz	
Rated input current		Approx. 7mA (at 100VAC, 60Hz)	
Operating voltage range		85 to 132VAC (50/60Hz $\pm$ 3Hz)	
Max. number of simultaneous input points		100% (at 110VAC) 60% (at 132VAC)	
Max. inrush current		200mA within 1ms (at 132VAC)	
ON voltage/ON current		80VAC or higher/3.5mA or higher	
OFF voltage/OFF current		30VAC or lower/1.7mA or lower	
Input resistance		Approx. 15k Ω at 60Hz, approx. 18k Ω at 50Hz	
Response time	OFF→ON	20ms or less (at 100VAC, 60Hz)	
	ON→OFF	20ms or less (at 100VAC, 60Hz)	
Wiring method for common		8 points/common (2-wire, terminal block type)	
Number of occupied stations		32-point assignment/station (8 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	35mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage: 1500Vp-p (AC type), 500Vp-p (DC type), noise width 1 μ s, noise frequency 25 to 60Hz (noise simulator condition) Fast transient/burst immunity test IEC 61000-4-4:1kV	
Withstand voltage		1780VACrms for 3 cycles between all AC external terminals and ground (2000m above sea level) 500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10M Ω or higher between all AC external terminals and ground (500VDC insulation resistance tester)	
		10M Ω or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Weight		0.20kg	
External connection system	Communication part, module power supply part	7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3 $\times$ 5.2 screw (tightening torque range: 0.59 to 0.88N $\cdot$ m) Applicable solderless terminal: 2 or less	
	I/O power supply part, I/O part	18-point direct-mount terminal block [I/O power supply, I/O signal] M3 $\times$ 5.2 screw (tightening torque range: 0.59 to 0.88N $\cdot$ m) Applicable solderless terminal: 2 or less	
Module mounting screw		M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N $\cdot$ m) Mountable with a DIN rail in 6 orientations	
Applicable DIN rail		TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)	
Applicable solderless terminal		<ul style="list-style-type: none"> RAV1.25-3 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm² (22 to 16 AWG) stranded wire] V2-MS3, RAP2-3SL, TGV2-3N [Applicable wire size: 1.25 to 2.0mm² (16 to 14 AWG) stranded wire] 	
Wire	Material	Copper	
	Temperature rating	75°C or more	
Accessory		User's manual	

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

4.1.2 AJ65SBTB2N-16A 100VAC input module

Item		Type	AC input module	Appearance
			AJ65SBTB2N-16A	
Number of input points			16 points	
Isolation method			Photocoupler	
Rated input voltage/rated frequency			100 to 120VAC (ripple ratio: within 5%), 50/60Hz	
Rated input current			Approx. 7mA (at 100VAC, 60Hz)	
Operating voltage range			85 to 132VAC (50/60Hz $\pm$ 3Hz)	
Max. number of simultaneous input points			100% (at 110VAC), 60% (at 132VAC)	
Max. inrush current			200mA within 1ms (at 132VAC)	
ON voltage/ON current			80VAC or higher/5mA or higher	
OFF voltage/OFF current			30VAC or lower/1.7mA or lower	
Input resistance			Approx. 15k Ω at 60Hz, approx. 18k Ω at 50Hz	
Response time	OFF $\rightarrow$ ON		20ms or less (at 100VAC, 60Hz)	
	ON $\rightarrow$ OFF		20ms or less (at 100VAC, 60Hz)	
Wiring method for common			16 points/common (2-wire, terminal block type)	
Number of occupied stations			32-point assignment/station (16 points used)	
Module power supply	Voltage		24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current		40mA or lower (at 24VDC and all points ON)	
Noise immunity			Noise voltage: 1500Vp-p (AC type), 500Vp-p (DC type), noise width 1 μ s, noise frequency 25 to 60Hz (noise simulator condition) Fast transient/burst immunity test IEC61000-4-4:1kV	
Withstand voltage			1780VACrms for 3 cycles between all AC external terminals and ground (2000m above sea level) 500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance			10M Ω or higher between all AC external terminals and ground (500VDC insulation resistance tester) 10M Ω or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Weight			0.25kg	
External connection system	Communication part, module power supply part		7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3 $\times$ 5.2 screw (tightening torque range: 0.59 to 0.88N $\cdot$ m) Applicable solderless terminal: 2 or less	
	I/O power supply part, I/O part		34-point direct-mount terminal block [I/O power supply, I/O signal] M3 $\times$ 5.2 screw (tightening torque range: 0.59 to 0.88N $\cdot$ m) Applicable solderless terminal: 2 or less	
Module mounting screw			M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N $\cdot$ m) Mountable with a DIN rail in 6 orientations	
Applicable DIN rail			TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)	
Applicable solderless terminal			• RAV1.25-3 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm ² (22 to 16 AWG) stranded wire] • V2-MS3, RAP2-3SL, TGV2-3N [Applicable wire size: 1.25 to 2.0mm ² (16 to 14 AWG) stranded wire]	
Wire	Material		Copper	
	Temperature rating		75°C or more	
Accessory			User's manual	

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

4.1.3 AJ65SBTB1-8D 24VDC input module (positive common (sink), negative common (source) loading)

Type		DC input module	
Item		AJ65SBTB1-8D	Appearance
Number of input points		8 points	
Isolation method		Photocoupler	
Rated input voltage		24VDC (ripple ratio: within 5%)	
Rated input current		Approx. 7mA	
Operating voltage range		19.2 to 26.4VDC	
Max. number of simultaneous input points		100%	
ON voltage/ON current		14VDC or higher/3.5mA or higher	
OFF voltage/OFF current		6VDC or lower/1.7mA or lower	
Input resistance		Approx. 3.3kΩ	
Response time	OFF→ON	1.5ms or less (at 24VDC)	
	ON→OFF	1.5ms or less (at 24VDC)	
Wiring method for common		8 points/common (2 points) (1-wire, terminal block type)	
Input type		Positive/negative common shared type (sink/source shared type)	
Number of occupied stations		32-point assignment/station (8 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	30mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP2X	
Weight		0.14kg	
External connection system	Communication part, module power supply part	7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

4.1.14 AJ65DBTB1-32D 24VDC input module (positive common (sink), negative common (source) loading)

Type		DC input module		Appearance
Item		AJ65DBTB1-32D		
Number of input points		32 points		
Isolation method		Photocoupler		
Rated input voltage		24VDC (ripple ratio: within 5%)		
Rated input current		Approx. 5mA		
Operating voltage range		20.4 to 31.2VDC		
Max. number of simultaneous input points		100% (at 26.4VDC)		
ON voltage/ON current		15VDC or higher/3mA or higher		
OFF voltage/OFF current		5VDC or lower/1.5mA or lower		
Input resistance		Approx. 4.7kΩ		
Response time	OFF→ON	10ms or less (at 24VDC)		
	ON→OFF	10ms or less (at 24VDC)		
Wiring method for common		16 points/common (2 points) (1-wire, terminal block type)		
Input type		Positive/negative common shared type (sink/source shared type)		
Number of occupied stations		32-point assignment/station (32 points used)		
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)		
	Current	45mA or lower (at 24VDC and all points ON)		
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)

The diagram illustrates the physical appearance of the AJ65VBTCE3-16D module. It is a DIN rail-mounted device with a vertical stack of 16 input points, numbered 0 to 15. Each point has a terminal block with pins for power supply, I/O, and communication. The module is labeled 'AJ65VBTCE3-16D' and 'CC-link'. A terminal block at the bottom is labeled 'CON' and 'A B C D'. A screw terminal block is also shown with labels '1 2 3 4 5 6 7' and 'ON 1 2 3 4 5 6 7'.

Type		DC input module	
Specification		AJ65VBTCE3-32DE	Appearance
Number of input points		32 points	
Isolation method		Photocoupler	
Rated input voltage		24VDC (ripple ratio: within 5%)	
Rated input current		Approx. 5mA	
Operating voltage range		19.2 to 26.4VDC	
Max. number of simultaneous input points		100% or 75% (Refer to Secion1.3.)	
ON voltage/ON current		14VDC or higher/3.5mA or higher	
OFF voltage/OFF current		6VDC or lower/1.7mA or lower	
Input resistance		Approx. 4.7kΩ	
Response time	OFF→ON	1.5ms or less (at 24VDC)	
	ON→OFF	1.5ms or less (at 24VDC)	
Wiring method for common		32 points/common (3-wire, sensor connector (e-CON) type)	
Input type		Negative common (source type)	
Supply current for connected device		2.0A or lower/common	
Number of occupied stations		32-point assignment/station (32 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	40mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP1XB

4.4 One-Touch Connector Type Input Module

4.4.1 AJ65VBTCU3-8D1 24VDC input module (positive common (sink type))

Type		DC input module		Appearance
Item		AJ65VBTCU3-8D1		
Number of input points		8 points		 <p>The diagram shows the physical layout of the AJ65VBTCU3-8D1 module. It features a DIN rail at the top with two connector types: CON A (LINK) and CON B (L). Below the DIN rail are eight input points labeled X0 through X7. Each point has a terminal block with pins for PW (Power), L (Line), RUN (Run), and ERR (Error). The module is mounted on a DIN rail and has a CC-Link connector at the bottom.</p>
Isolation method		Photocoupler		
Rated input voltage		24VDC (ripple ratio: within 5%)		
Rated input current		Approx. 5mA		
Operating voltage range		19.2 to 26.4VDC		
Max. number of simultaneous input points		100%		
ON voltage/ON current		15VDC or higher/3mA or higher		
OFF voltage/OFF current		3VDC or lower/0.5mA or lower		
Input resistance		Approx. 4.7kΩ		
Response time	OFF→ON	0.2ms or less (at 24VDC)		
	ON→OFF	0.2ms or less (at 24VDC)		
Wiring method for common		8 points/common (3-wire, one-touch connector type)		
Input type		Positive common (sink type)		
Supply current for connected device		1.0A or lower/common		
Number of occupied stations		32-point assignment/station (8 points used)		
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)

*1 For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

*2 Use cables with outside diameter of 1.3mm or shorter to connect 40 cables to the connector. In addition, consider the amount of current to be used and select appropriate cables.

4.6 Waterproof Type Input Module

4.6.1 AJ65FBTA4-16D 24VDC input module (positive common (sink type))

Type		DC input module		Appearance
Item		AJ65FBTA4-16D		
Number of input points		16 points		
Isolation method		Photocoupler		
Rated input voltage		24VDC (ripple ratio: within 5%)		
Rated input current		Approx. 7mA		
Operating voltage range		20.4 to 26.4VDC		
Max. number of simultaneous input points		100%		
ON voltage/ON current		14VDC or higher/3.5mA or higher		
OFF voltage/OFF current		6VDC or lower/1.7mA or lower		
Input resistance		Approx. 3.3kΩ		
Response time	OFF→ON	1.5ms or less (at 24VDC)		
	ON→OFF	1.5ms or less (at 24VDC)		
Wiring method for common		16 points/common (2- to 4-wire, waterproof connector type)		
Input type		Positive common (sink type)		
Supply current for connected device		1.0A or lower/common		
Number of occupied stations		32-point assignment/station (16 points used)		
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)		
	Current	40mA or lower (at 24VDC and all points ON)		
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)		
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground		
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)		
Protection degree		IP67		
Weight		0.40kg		
Accessory		User's manual		
Optional item		Waterproof cap: A6CAP-WP2 (20 pieces)		
Other connecting devices		Refer to Section 1.6.1.		

4.6.2 AJ65FBTA4-16DE 24VDC input module (negative common (source type))

Type		DC input module	
		AJ65FBTA4-16DE	
Item		Appearance	
Number of input points		16 points	
Isolation method		Photocoupler	
Rated input voltage		24VDC (ripple ratio: within 5%)	
Rated input current		Approx. 7mA	
Operating voltage range		20.4 to 26.4VDC	
Max. number of simultaneous input points		100%	
ON voltage/ON current		14VDC or higher/3.5mA or higher	
OFF voltage/OFF current		6VDC or lower/1.7mA or lower	
Input resistance		Approx. 3.3k Ω	
Response time	OFF→ON	1.5ms or less (at 24VDC)	
	ON→OFF	1.5ms or less (at 24VDC)	
Wiring method for common		16 points/common (2- to 4-wire, waterproof connector type)	
Input type		Negative common (source type)	
Supply current for connected device		1.0A or lower/common	
Number of occupied stations		32-point assignment/station (16 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	40mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1 μ s, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10M Ω or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP67	
Weight		0.40kg	
Accessory		User's manual	
Optional item		Waterproof cap: A6CAP-WP2 (20 pieces)	
Other connecting devices		Refer to Section 1.6.1.	

4.6.3 AJ65SBTW4-16D 24VDC input module (positive common (sink), negative common (source) loading)

* 2: Do not apply an excessive force (39N or more) to the connected cable at the inlet of the pipe.

* 3: To use the wired module that has been stored exceeding the ambient temperature of 55°C, retighten the nuts.

5 SPECIFICATIONS FOR OUTPUT MODULES

This chapter describes the specifications for an output module that can be connected to the CC-Link system.

5.1 Terminal Block Type Output Module

5.1.1 AJ65SBTB1-8T transistor output module (sink type)

Item		Type	Transistor output module	Appearance
			AJ65SBTB1-8T	
Number of output points			8 points	
Isolation method			Photocoupler	
Rated load voltage			12/24VDC (ripple ratio: within 5%)	
Operating load voltage range			10.2 to 26.4VDC	
Max. load current			0.5A/point, 2.4A/common	
Max. inrush current			1.0A, 10ms or less	
Leakage current at OFF			0.25mA or lower	
Max. voltage drop at ON			0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A	
Output type			Sink type	
Protection function			Overload protection, overvoltage protection, overheat protection	
Response time	OFF→ON		0.5ms or less	
	ON→OFF		1.5ms or less (resistive load)	
External power supply for output part	Voltage		12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 26.4VDC)	
	Current		15mA or lower (TYP. 24VDC/common), excluding external load current	
Surge suppressor			Zener diode	
Wiring method for common			8 points/common (1-wire, terminal block type)	
Number of occupied stations			32-point assignment/station (8 points used)	
Module power supply	Voltage		24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current		35mA or lower (at 24VDC and all points ON)	
Noise immunity			Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage			500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance			10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree			IP2X	
Weight			0.14kg	
External connection system	Communication part, module power supply part		7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3×5.2 screw (tightening torque range: 0.59 to 0.88N•m) Applicable solderless terminal: 2 or less	
	I/O power supply part, I/O part		10-point direct-mount terminal block [I/O power supply, I/O signal] M3×5.2 screw (tightening torque range: 0.59 to 0.88N•m) Applicable solderless terminal: 2 or less	
Module mounting screw			M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N•m) Mountable with a DIN rail in 6 orientations	
Applicable DIN rail			TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)	
Applicable solderless terminal			<ul style="list-style-type: none"> RAV1.25-3 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm² (22 to 16 AWG) stranded wire] V2-MS3, RAP2-3SL, TGV2-3N [Applicable wire size: 1.25 to 2.0mm² (16 to 14 AWG) stranded wire] 	
Wire	Material		Copper	
	Temperature rating		75°C or more	
Accessory			User's manual	

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

Surge suppressor		None	
External power supply for output part (CTL+ and CTLG terminals)	Voltage	24VDC $\pm 10\%$ (ripple ratio: 4Vp-p or lower)	
	Current	180mA or lower (at 24VDC and all points ON)	
Wiring method for common		8 points/common (1-wire, terminal block type)	
Number of occupied stations		32-point assignment/station (32 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	80mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage: 1500Vp-p (AC type), 500Vp-p (DC type), noise width 1 μ s, noise frequency 25 to 60Hz (noise simulator condition)	
Withstand voltage		1500VAC for 1 minute between all AC external terminals and ground 500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10M Ω or higher between all AC external terminals and ground (500VDC insulation resistance tester)	
		10M Ω or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP1X	
Weight		0.7kg	
External connection system		50-point terminal block [Transmission circuit, module power supply, FG, I/O power supply, I/O signal]	
		M3.5 $\times$ 7 screw (tightening torque range: 0.68 to 0.92N·m) Applicable solderless terminal: 2 or less	
Module mounting screw		M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N·m)	
Applicable solderless terminal		• R1.25-3.5 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm ² (22 to 16 AWG) stranded wire]	
		• RAV2-3.5 (compliant with JIS C 2805) [Applicable wire size: 1.25 to 2.0mm ² (16 to 14 AWG) stranded wire]	
Wire	Material	Copper	
	Temperature rating	75°C or more	
Accessory		User's manual	
Part sold separately		A6DIN1C, A2CCOM-TB	

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

5.2 Spring Clamp Terminal Block Type Output Module

5.2.1 AJ65VBTS2-16T transistor output module (sink type)

Type		Transistor output module	Appearance
Item		AJ65VBTS2-16T	
Number of output points		16 points	
Isolation method		Photocoupler	
Rated load voltage		12/24VDC (ripple ratio: within 5%)	
Operating load voltage range		10.2 to 26.4VDC	
Max. load current		0.5A/point, 4A/common	
Max. inrush current		1.0A, 10ms or less	
Leakage current at OFF		0.1mA or lower	
Max. voltage drop at ON		0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A	
Output type		Sink type	
Protection function		None	
Response time	OFF→ON	1ms or less	
	ON→OFF	1ms or less (resistive load)	
External power supply for output part	Voltage	12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 26.4VDC)	
	Current	30mA or lower (at 24VDC and all points ON), excluding external load current	
Surge suppressor		Zener diode	
Wiring method for common		16 points/common (2-wire, spring clamp terminal block type)	
Number of occupied stations		32-point assignment/station (16 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	45mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP1XB	
Weight		0.24kg	
External connection system	Communication part	One-touch connector for communication [Transmission circuit] 5-pin IDC plug is sold separately: A6CON-L5P <Optional> Online connector for communication: A6CON-LJ5P	
	Power supply part	One-touch connector for power supply and FG [Module power supply, FG] 5-pin IDC plug is sold separately: A6CON-PW5P, A6CON-PW5P-SOD <Optional> Online connector for power supply: A6CON-PWJ5P	
	I/O part	2-piece spring clamp terminal block [I/O power supply, I/O signals]	
Applicable DIN rail		TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)	
Applicable wire size	Connector for communication	Applicable cable: FANC-110SBH, FA-CBL200PSBH, CS-110	
	Connector for power supply and FG	0.66 to 0.98mm ² (18 AWG) [φ2.2 to 3.0mm (A6CON-PW5P), φ2.0 to 2.3mm (A6CON-PW5P-SOD)] Wire diameter: 0.16mm or more Insulating coating material: PVC (heat-resistant)	
	Spring clamp terminal block for I/O	Stranded wire 0.08 to 1.5mm ² (28 to 16 AWG) * 1 Wire strip length: 8 to 11mm	
	Applicable solderless terminal	NF0.5 [Applicable wire size: 0.5mm ²] NF0.75 [Applicable wire size: 0.75mm ²] NF1 [Applicable wire size: 0.9 to 1.0mm ²] NF1.5 [Applicable wire size: 1.25 to 1.5mm ²] TGV TC1.25-9T [Applicable wire size: 0.3 to 1.65mm ²] TGWV TC1.25-T9 [Applicable wire size: 0.3 to 1.65mm ²]	
Accessory		User's manual, Holding fixtures for screw installation	

* 1: Insert one wire per terminal.

5.2.2 AJ65VBTS2-32T transistor output module (sink type)

Type		Transistor output module	Appearance
Item		AJ65VBTS2-32T	
Number of output points		32 points	
Isolation method		Photocoupler	
Rated load voltage		12/24VDC (ripple ratio: within 5%)	
Operating load voltage range		10.2 to 26.4VDC	
Max. load current		0.5A/point, 4A/common	
Max. inrush current		1.0A, 10ms or less	
Leakage current at OFF		0.1mA or lower	
Max. voltage drop at ON		0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A	
Output type		Sink type	
Protection function		None	
Response time	OFF→ON	1ms or less

5.3 Sensor Connector (e-CON) Type Output Module

5.3.1 AJ65VBTCE2-8T transistor output module (sink type)

Type		Transistor output module	Appearance
Item		AJ65VBTCE2-8T	
Number of output points		8 points	
Isolation method		Photocoupler	
Rated load voltage		12/24VDC (ripple ratio: within 5%)	
Operating load voltage range		10.2 to 26.4VDC	
Max. load current		0.1A/point, 0.8A/common	
Max. inrush current		0.7A, 10ms or less	
Leakage current at OFF		0.1mA or lower	
Max. voltage drop at ON		0.1VDC or lower (TYP.) 0.1A, 0.2VDC or lower (MAX.) 0.1A	
Output type		Sink type	
Protection function		Overload protection, overvoltage protection, overheat protection	
Response time	OFF→ON	1ms or less	
	ON→OFF	1ms or less (resistive load)	
External power supply for output part	Voltage	12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 26.4VDC)	
	Current	5mA or lower (at 24VDC and all points ON), excluding external load current	
Surge suppressor		Zener diode	
Wiring method for common		8 points/common (2-wire, sensor connector (e-CON) type)

	Connector for power supply and FG	0.66 to 0.98mm ² (18 AWG) [φ2.2 to 3.0mm (A6CON-PW5P), φ2.0 to 2.3mm (A6CON-PW5P-SOD)] Wire diameter: 0.16mm or more Insulating coating material: PVC (heat-resistant)	
	Connector for I/O	Sensor connector (e-CON). Applicable connector plugs are sold separately. * 1 (applicable wire size: 0.08 to 0.5mm ² , depending on the connector plug)	
Accessory		User's manual, Holding fixtures for screw installation	

* 1: Refer to Section 1.6.2 for details.

External connection

<When using online connectors>

The diagram illustrates the external connection for MELSEC-A output modules. It shows four main connector types: CONA and CONB for communication (LINK CABLE IN/OUT), CONC and COND for power supply and FG (UNIT POWER CABLE IN/OUT, I/O POWER CABLE IN/OUT), and CON1 and CON8 for loads. The diagram includes a 'One-touch connector for communication' and a 'One-touch connector for power supply and FG *1'. It also shows a 'Constant-voltage circuit' and 'Insulation' components. The wiring is detailed for each pin, showing connections to DA, DB, DG, SLD, FG, +24V, and 24G lines.

External connection system	Communication part	One-touch connector for communication [Transmission circuit] 5-pin IDC plug is sold separately. <Optional> Online connector for communication: A6CON-LJ5P	
	Power supply part	One-touch connector for power supply and FG [Module power supply, I/O power supply, FG] 5-pin IDC plug is sold separately: A6CON-PW5P, A6CON-PW5P-SOD <Optional> Online connector for power supply: A6CON-PWJ5P	
	I/O part	One-touch connector for I/O 4-pin IDC plug is sold separately.	
Applicable DIN rail		TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)	
Applicable wire size	Connector for communication	Applicable cable: FANC-110SBH, FA-CBL200PSBH, CS-110	
	Connector for power supply and FG	0.66 to 0.98mm ² (18 AWG) [φ2.2 to 3.0mm (A6CON-PW5P), φ2.0 to 2.3mm (A6CON-PW5P-SOD)] Wire diameter: 0.16mm or more Insulating coating material: PVC (heat-resistant)	
	Connector for I/O	φ1.0 to 1.4 (A6CON-P214), φ1.4 to 2.0 (A6CON-P220) [Applicable wire size: 0.14 to 0.2mm ²] φ1.0 to 1.4 (A6CON-P514), φ1.4 to 2.0 (A6CON-P520) [Applicable wire size: 0.3 to 0.5mm ²]

5.4.4 AJ65SBTC1-32T1 transistor output module (sink type)

Item		Type	Transistor output module	Appearance
			AJ65SBTC1-32T1	
Number of output points			32 points	
Isolation method			Photocoupler	
Rated load voltage			12/24VDC (ripple ratio: within 5%)	
Operating load voltage range			10.2 to 26.4VDC	
Max. load current			0.1A/point, 3.2A/common	
Max. inrush current			1.0A, 10ms or less	
Leakage current at OFF			0.1mA or lower	
Max. voltage drop at ON			0.3VDC or lower (TYP.) 0.1A, 0.6VDC or lower (MAX.) 0.1A	
Output type			Sink type	
Protection function			None	
Response time	OFF→ON		0.5ms or less	
	ON→OFF		1.5ms or less (resistive load)	
External power supply for output part	Voltage		12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 26.4VDC)	
	Current		50mA or lower (TYP. 24VDC/common), excluding external load current	
Surge suppressor			Zener diode	
Wiring method for common			32 points/common (1-wire, one-touch connector type)	
Number of occupied stations			32-point assignment/station (32 points used)	
Module power supply	Voltage		24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current		60mA or lower (at 24VDC and all points ON)	
Noise immunity			Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage			500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance			10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree			IP2X	
Weight			0.16kg	
External connection system	Communication part, module power supply part		7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less

Response time	OFF→ON	0.5ms or less	
	ON→OFF	1.5ms or less (resistive load)	
External power supply for output part	Voltage	12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 28.8VDC)	
	Current	20mA or lower (at 24VDC and all points ON), excluding external load current	
Surge suppressor		Zener diode	
Wiring method for common		16 points/common (2-wire, waterproof connector type)	
Number of occupied stations		32-point assignment/station (16 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	50mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP67	
Weight		0.40kg	
Accessory		User's manual	
Optional item		Waterproof cap: A6CAP-WP2 (20 pieces)	
Other connecting devices		Refer to Section 1.6.1.	

5.6.2 AJ65FBTA2-16TE transistor output module (source type)

Item	Type	Transistor output module	
		AJ65FBTA2-16TE	Appearance
Number of output points		16 points	
Isolation method		Photocoupler	
Rated load voltage		12/24VDC (ripple ratio: within 5%)	
Operating load voltage range		10.2 to 28.8VDC	
Max. load current		1.0A/point, 4A/common	
Max. inrush current		2.0A, 10ms or less	
Leakage current at OFF		0.3mA or lower	
Max. voltage drop at ON		0.15VDC or lower (TYP.) 1.0A, 0.2VDC or lower (MAX.) 1.0A	
Output type		Source type	
Protection function		Overload protection, overheat protection (The LED turns on when any protection is activated.)	
Response time	OFF→ON	0.5ms or less	
	ON→OFF	1.5ms or less (resistive load)	
External power supply for output part	Voltage	12/24VDC (ripple ratio: within 5%) (allowable voltage range: 10.2 to 28.8VDC)	
	Current	30mA or lower (at 24VDC and all points ON), excluding external load current	
Surge suppressor		Zener diode	
Wiring method for common		16 points/common (2-wire, waterproof connector type)	
Number of occupied stations		32-point assignment/station (16 points used)	
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)	
	Current	50mA or lower (at 24VDC and all points ON)	
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)	
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground	
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)	
Protection degree		IP67	
Weight		0.40kg	
Accessory		User's manual	
Optional item		Waterproof cap: A6CAP-WP2 (20 pieces)	
Other connecting devices		Refer to Section 1.6.1.

6 SPECIFICATIONS FOR COMBINED MODULES

This chapter describes the specifications for a combined module that can be connected to the CC-Link system.

6.1 Terminal Block Type Combined Module

6.1.1 AJ65SBTB32-8DT combined module

Type		DC input transistor output combined module				Appearance
Item		AJ65SBTB32-8DT				
		Input		Output		
Number of input points		4 points		Number of output points		4 points
Isolation method		Photocoupler		Isolation method		Photocoupler
Rated input voltage		24VDC (ripple ratio: within 5%)		Rated load voltage		24VDC (ripple ratio: within 5%)
Rated input current		Approx. 7mA		Operating load voltage range		19.2 to 26.4VDC
Operating voltage range		19.2 to 26.4VDC		Max. load current		0.5A/point, 1.2A/common
Max. number of simultaneous input points		100%		Max. inrush current		1.0A, 10ms or less
ON voltage/ON current		14VDC or higher/ 3.5mA or higher		Leakage current at OFF		0.25mA or lower
OFF voltage/OFF current		6VDC or lower/ 1.7mA or lower		Max. voltage drop at ON		0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A
Input resistance		Approx. 3.3kΩ		Output type		Sink type
				Protection function		Overload protection, overvoltage protection, overheat protection
Response time	OFF→ON	1.5ms or less (at 24VDC)		Response time	OFF→ON	0.5ms or less
	ON→OFF	1.5ms or less (at 24VDC)			ON→OFF	1.5ms or less (resistive load)
				External power supply for output part	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 19.2 to 26.4VDC)
					Current	14.6mA or lower (at 24VDC and all points ON), excluding external load current
Input type		Positive common (sink type)		Surge suppressor		Zener diode
Supply current for connected device		1.0A or lower/common				
Wiring method for common		8 points/common (input: 3-wire terminal block type, output: 2-wire terminal block type)				
Number of occupied stations		32-point assignment/station (8 points used)				
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)				
	Current	45mA or lower (at 24VDC and all points ON)				
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)				
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground				
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)				
Protection degree		IP2X				
Weight		0.18kg				
External connection system	Communication part, module power supply part	7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less				
	I/O power supply part, I/O part	18-point direct-mount terminal block [I/O power supply, I/O signal] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less				
	Module mounting screw	M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N·m) Mountable with a DIN rail in 6 orientations				
Applicable DIN rail		TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)				
Applicable solderless terminal		• RAV1.25-3 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm ² (22 to 16 AWG) stranded wire]				
		• V2-MS3, RAP2-3SL, TGV2-3N [Applicable wire size: 1.25 to 2.0mm ² (16 to 14 AWG) stranded wire]				
Wire	Material	Copper				
	Temperature rating	75°C or more				
Accessory		User's manual				

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

6.1.2 AJ65SBTB32-8DT2 combined module

		AJ65SBTB32-16DT					
		Input		Output			
Number of input points		8 points		Number of output points		8 points	
Isolation method		Photocoupler		Isolation method		Photocoupler	
Rated input voltage		24VDC (ripple ratio: within 5%)		Rated load voltage		24VDC (ripple ratio: within 5%)	
Rated input current		Approx. 7mA		Operating load voltage range		19.2 to 26.4VDC	
Operating voltage range		19.2 to 26.4VDC		Max. load current		0.5A/point, 2.4A/common	
Max. number of simultaneous input points		100%		Max. inrush current		1.0A, 10ms or less	
ON voltage/ON current		14VDC or higher/3.5mA or higher		Leakage current at OFF		0.25mA or lower	
OFF voltage/OFF current		6VDC or lower/1.7mA or lower		Max. voltage drop at ON		0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A	
Input resistance		Approx. 3.3kΩ		Output type		Sink type	
				Protection function		Overload protection, overvoltage protection, overheat protection	
Response time	OFF→ON	1.5ms or less (at 24VDC)	Response time	OFF→ON	0.5ms or less		
	ON→OFF	1.5ms or less (at 24VDC)		ON→OFF	1.5ms or less (resistive load)		
			External power supply for output part	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 19.2 to 26.4VDC)		
				Current	17.8mA or lower (at 24VDC and all points ON), excluding external load current		
Input type		Positive common (sink type)		Surge suppressor		Zener diode	
Supply current for connected device		1.0A or lower/common					
Wiring method for common		16 points/common (input: 3-wire terminal block type, output: 2-wire terminal block type)					
Number of occupied stations		32-point assignment/station (16 points used)					
Module power supply	Voltage	24VDC (ripple ratio: within 5%) (allowable voltage range: 20.4 to 26.4VDC)					
	Current	50mA or lower (at 24VDC and all points ON)					
Noise immunity		Noise voltage 500Vp-p, noise width 1μs, noise frequency 25 to 60Hz (DC type noise simulator condition)					
Withstand voltage		500VAC for 1 minute between all DC external terminals and ground					
Insulation resistance		10MΩ or higher between all DC external terminals and ground (500VDC insulation resistance tester)					
Protection degree		IP2X					
Weight		0.25kg					
External connection system	Communication part, module power supply part	7-point two-piece terminal block [Transmission circuit, module power supply, FG] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less					
	I/O power supply part, I/O part	34-point direct-mount terminal block [I/O power supply, I/O signal] M3×5.2 screw (tightening torque range: 0.59 to 0.88N·m) Applicable solderless terminal: 2 or less					
Module mounting screw		M4 screw with plain washer finished round (tightening torque range: 0.78 to 1.08N·m) Mountable with a DIN rail in 6 orientations					
Applicable DIN rail		TH35-7.5Fe, TH35-7.5Al (compliant with IEC 60715 and JIS C 2812)					
Applicable solderless terminal		• RAV1.25-3 (compliant with JIS C 2805) [Applicable wire size: 0.3 to 1.25mm ² (22 to 16 AWG) stranded wire] • V2-MS3, RAP2-3SL, TGV2-3N [Applicable wire size: 1.25 to 2.0mm ² (16 to 14 AWG) stranded wire]					
Wire	Material	Copper					
	Temperature rating	75°C or more					
Accessory		User's manual					

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

The diagram illustrates the physical layout of the AJ65SBTB1-32KDT2 module. It features a 32-point terminal block on the left side, with pins labeled from X1 to X32. The module is designed for DIN rail mounting, as shown by the mounting bracket on the right. The diagram also indicates the location of the communication and power supply terminals.

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

Diagram of the AJ65SBTB1-32DT3 module showing terminal block connections and pin numbers. The module is a DIN rail mountable unit with a 32-point terminal block. The terminal block is divided into two sections: a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the right. The left section is labeled with pin numbers 1 through 16, and the right section is labeled with pin numbers 17 through 32. The module is shown with a DIN rail and a screw. The terminal block is a 32-point terminal block with a 16-point section on the left and a 16-point section on the

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

6.1.18 AJ65SBTB1-32KDT8 combined module

Type		DC input transistor output combined module										Appearance
Item		AJ65SBTB1-32KDT8										
		Input					Output					
Number of input points		16 points					Number of output points		16 points			
Isolation method		Photocoupler					Isolation method		Photocoupler			
Rated input voltage		12VDC (ripple ratio: within 5%)					Rated load voltage		12VDC (ripple ratio: within 5%)			
Rated input current		Approx. 11mA					Operating load voltage range		10.2 to 14.4VDC			
Operating voltage range		10.2 to 14.4VDC					Max. load current		0.5A/point, 3.6A/common			
Max. number of simultaneous input points		100%					Max. inrush current		1.0A, 10ms or less			
ON voltage/ON current		5.6VDC or higher/4mA or higher					Leakage current at OFF		0.1mA or lower			
OFF voltage/OFF current		2.4VDC or lower/1.7mA or lower					Max. voltage drop at ON		0.3VDC or lower (TYP.) 0.5A, 0.6VDC or lower (MAX.) 0.5A

The diagram illustrates the physical layout of the AJ65SBTB1-32KDT8 module. It features a 32-point terminal block on the left side, with pins labeled Y1 through Y32. The module is designed for DIN rail mounting, as shown by the mounting bracket on the right. The terminal block is divided into two sections: a 16-point section for input/output and a 16-point section for power supply. The power supply section includes pins for 24VDC, 0V, and a common ground. The input/output section includes pins for 12VDC, 0V, and a common ground. The module is shown in a perspective view, highlighting its compact size and standard DIN rail compatibility.

* For applicable solderless terminals connected to the terminal block, refer to the table above. Use applicable wires for the solderless terminals and fix them with an appropriate tightening torque. Use UL listed solderless terminals and, for crimping, use a tool recommended by their manufacturer.

The diagram illustrates the physical layout of the AJ65VBTS32-16DT module. It features a top terminal block with 32 pins, organized into two rows of 16 pins each. The pins are labeled with letters A through P, with some pins having additional labels like 'COM+' and 'COM-'. Below the main terminal block, there are two smaller connector blocks: one for communication (5-pin IDC plug) and one for power supply (5-pin IDC plug). The module is shown with mounting holes and a DIN rail connector.

The diagram illustrates the physical module, a vertical DIN rail mountable unit. It features a terminal block on the right side with 32 terminals, numbered 1 through 32. The terminals are organized into two columns of 16. The top 16 terminals are for input, and the bottom 16 are for output. The module is shown mounted on a DIN rail, with a screw terminal block at the bottom for power supply and ground connections. The module is labeled 'AJ65VBTCE3-32DTE' and 'DC INPUT TRANSDUCER'.

The diagram illustrates the terminal block of the AJ65VBTCFJ1-32DT1 module. It features a central 32-pin IDC connector with pins labeled 1 through 32. To the left, there are two 5-pin IDC connectors labeled LINK (CON.A) and CON.B. To the right, there is a 5-pin IDC connector labeled CON.E. Below the main connector, there are two 5-pin IDC connectors labeled PW/AUX (CON.C) and CON.D. The diagram also shows a 40-pin M3 screw connector labeled CON.F. A CAUTION label indicates that the external power supply should not be supplied to CON.E. A CC-Link logo is present at the bottom right.

*1 Use cables with outside diameter of 1.3mm or shorter to connect 40 cables to the connector. In addition, consider the amount of current to be used and select appropriate cables.

7 HANDLING OF COMPACT REMOTE I/O MODULES

7.1 Handling and Installation Precautions

This section lists the precautions for handling and installing the compact remote I/O module for the CC-Link system.

WARNING

- Do not touch any terminal or connector while power is on.
Doing so will cause electric shock.

CAUTION

- When wiring, shield the module using a cover or similar means to prevent foreign matter such as dust or wire chips from entering the module. Such foreign matter can cause a fire, failure, or malfunction. Remove the shield for heat dissipation before operating the system.
- Do not disassemble or modify the module.
Doing so may cause failure, malfunction, injury, or a fire.
- Do not directly touch any conductive part of the module.
Doing so can cause malfunction or failure of the module.
- Do not drop or apply any strong shock to the module. Doing so may damage the module.
- Use applicable solderless terminals and tighten them within the specified torque range. If any spade solderless terminal is used, it may be disconnected when the terminal screw comes loose, resulting in failure.
- Tighten the terminal screw within the specified torque range.
Undertightening can cause fire or malfunction.
Overtightening can damage the screw, resulting in short circuit or malfunction.
- When disposing of this product, treat it as industrial waste.
- Use the module in an environment that meets the general specifications in this manual.
Failure to do so may result in electric shock, fire, malfunction, or damage to or deterioration of the product.
- Securely fix the module with a DIN rail or mounting screws. Tighten the screws within the specified torque range.
Undertightening can cause drop of the screw, short circuit or malfunction.
Overtightening can damage the screw, resulting in drop or short circuit.
- Shut off the external power supply (all phases) used in the system before mounting or removing a module to/from a control panel.
Failure to do so may cause the module to fail or malfunction.

- (1) Tighten the module mounting screw or terminal block screw within the following torque range. Overtightening can damage the module case.

(a) Terminal block type, one-touch connector type, or FCN connector type

Screw	Tightening torque range
Module mounting screw (M4 screw with plain washer finished round)	0.78 to 1.08N·m
Terminal block screw (M3)	0.59 to 0.88N·m
Terminal block installation screw (M3.5)	0.68 to 0.98N·m

(b) Waterproof type (AJ65SBTW□-16□)

Screw	Tightening torque range
Module top cover mounting screw (M3)	0.54 to 0.64N·m
Module front cover mounting screw (M3)	0.54 to 0.64N·m
Nut for pipe	0.99 to 1.48N·m
Module mounting screw (M4 screw with plain washer finished round)	1.27 to 1.47N·m
Terminal block screw (M3)	0.59 to 0.88N·m
Terminal block installation screw (M3.5)	0.68 to 0.98N·m

(c) Low profile waterproof type (AJ65FBTA□-16□)

Screw	Tightening torque range
Communication adapter mounting screw (M4)	0.42 to 0.58N·m
Module mounting screw (M4)	0.78 to 1.18N·m
Waterproof cap (A6CAP-WP2)	0.29 to 0.34N·m

(d) Spring clamp terminal block type or sensor connector (e-CON) type

Screw	Tightening torque range
Mounting bracket (M4)	0.82 to 1.11N·m

POINT

- For a terminal and a screw, avoid adhering to oil.
Doing so may damage the screw.
- When using two solderless terminals, place them with their backs faced.
If not, a screw cannot be full inserted, resulting in damage to the screw.
- Tighten the terminal screw with an applicable driver.
Failure to do so may damage the screw.

- (2) A scratch-resistant film is attached on the surface of the module during transportation.
Remove the film before operation.

- (3) Observe the following points when installing a module to a control panel using a DIN rail.
- (a) Applicable DIN rail (compliant with IEC 60715 and JIS C 2812)
TH35-7.5Fe
TH35-7.5Al
 - (b) Mounting pitch
When installing a DIN rail to a control panel, keep mounting pitches 200mm or less.
 - (c) Area where screws cannot be used for Din rail installation
When installing the AJ65VBTCE□-16□ and AJ65VBTCE□-32□ to the DIN rail horizontally as shown below, tighten a screw so that a certain distance will be ensured between the screw and the DIN rail hook on the right side of module.
Failure to do so may cause the screw to interfere with the DIN rail hook.
- 1) For AJ65VBTCE□-16□
Tighten a screw keeping a distance of 50mm or more from the DIN rail hook on the right side of module.

2) For AJ65VBTC□-32□

Tighten a screw keeping a distance of 80mm or more from the DIN rail hook on the right side of module.

(4) When mounting the compact remote I/O module to a DIN rail, push in the DIN rail hook located at the bottom of the module until it clicks.

For AJ65SBTB1-8 □, AJ65SBTB1-16 □,
AJ65SBTC4-16 □, AJ65SBTC1-32 □,
AJ65SBTCF1-32 □, AJ65SBTB2-8 □,
AJ65SBTB2N-8 □, AJ65SBTB32-8 □,
AJ65VBTS □ -16□, AJ65VBTC□ -8 □,
AJ65VBTC□ -16 □
compact remote I/O modules

For AJ65SBTB1B-16 □, AJ65SBTB1-32 □,
AJ65SBTB2-16 □, AJ65SBTB2N-16□,
AJ65SBTB3-16□, AJ65SBTB32-16□,
AJ65VBTS□-32□, AJ65VBTC□-32□
compact remote I/O modules

Note: Do not touch the board
as described below.
It may result in failure.

- (5) When mounting the compact remote I/O module on the DIN rail, put its upper hook onto the fixing bracket and push the module until it clicks.

[Mounting dimensions]

(a) A6PLT-J65V1 (For module width 41mm only)

(b) A6PLT-J65V2 (For module width 60mm only)

Unit : mm

- (6) Do not install the compact remote I/O module to the place where:
- (a) an ambient temperature is outside the range of 0 to 55°C (0 to 45°C for the waterproof remote I/O module),
 - (b) ambient humidity is outside the range of 10 to 99%RH,
 - (c) condensation occurs due to a sudden temperature change,
 - (d) corrosive gas or combustible gas is present,
 - (e) conductive powder (such as dust and iron powder), oil mist, salinity, or organic solvent is filled,
 - (f) the module is exposed to direct sunlight,
 - (g) a strong electric field or strong magnetic field is generated, and
 - (h) the module is subject to vibration or shock.

- (7) When installing the compact remote I/O module into a panel, etc., provide 60mm or more of space between the top and bottom of the module and other structures or parts so that good ventilation and ease of operation when exchanging modules can be secured.
- (8) Install the compact remote I/O module on a level surface.
If the surface is uneven, unnecessary force is applied to the printed circuit board, causing malfunction.
- (9) When installing the waterproof-type remote I/O module, provide the space shown in the figure below between the top and bottom of the module and other structures or parts so that good ventilation can be secured and that interference and application of load on the waterproof connector can be prevented.
When connecting two modules in parallel, secure 7mm or more space between them.

<When two modules are installed in parallel>

Unit : mm

- (10) If a waterproof cap is being installed on the low profile waterproof type remote I/O module, in order to improve ventilation and also to prevent interference, as well as to prevent a load from bearing on the waterproof connector, all the distances shown in the following figures between the module's side surfaces and the structure or parts.

- *1 If you disconnect and connect the communications adapter, set the operating distance using a screwdriver, etc.
- *2 If you are using a right angle type waterproof plug or Y branch connector, set a distance where no load will be brought to bear on the cable.

- (11) When installing the sensor connector (e-CON) type modules in parallel, take intervals between the modules as shown below.

(The interval is required for the size of a DIN rail hook or mounting brackets.)

Installation method of the module	Installation orientation of the module	Interval* ³
Using a DIN rail* ¹	Basic, Upside down (vertical installation)	5mm
	Basic, Upside down (horizontal installation)	5mm
Using screws* ²	Basic, Upside down (vertical installation)	5mm
	Basic, Upside down (horizontal installation)	15mm

- * 1 This is the case when a DIN rail is installed horizontally. Do not apply this interval to the AJ65VBTCE□-8□.
- * 2 This is the case when mounting brackets are attached on the top and bottom sides of the module. If the brackets are attached on the right and left sides of the module, apply the intervals reversely. (The interval for the vertical installation is 15mm and the interval for the horizontal installation is 5mm.)
- * 3 The interval indicates the distance from the modules that are installed on the either side.

(12) When handling the DIP switch, observe the following:

(a) Use a compact driver.

Do not handle the DIP switch with a mechanical pencil or a sharp, such as a pair of tweezers and a needle.

If the lead or lead powder of a mechanical pencil enters into the switch, a failure may result. Or if it drops into a circuit board, an electrical problem may result.

Using a sharp may damage the switch, resulting in failure.

(b) Slide the switch lever one by one horizontally to the intended direction.

If the driver pushes the switch lever at an angle or from the right above, the switch may be damaged or transformed due to the pressing load.

(c) Set the station number setting switch, transmission speed setting switch, or input response speed switch while the compact remote I/O module is turned off, as the settings are applied when the module is powered on.

(d) If the module has a switch cover, close it after completing the DIP switch operation to prevent unintended contact with the switches and to keep out dirt and dust.

7.2 Wiring Procedures for One-touch Connector Plugs

7.2.1 List of one-touch connector plugs

The following table lists one-touch connector plugs applicable to the CC-Link system compact remote I/O module.

Product name	Mitsubishi Electric product model name	Part model name	Specifications			Color of the cover
			Applicable cable size (core)	Applicable cable size (diameter)	Maximum rated current	
One-touch connector plug *1, *4	A6CON-P214	33104-6000FL *5	0.14 to 0.2mm ² (26 to 24 AWG)	φ1.0 to 1.4mm	2A*7	Transparent
	A6CON-P220	33104-6100FL *5		φ1.4 to 2.0mm		Yellow
	A6CON-P514	33104-6200FL *5	0.3 to 0.5mm ² (22 to 20 AWG)	φ1.0 to 1.4mm	3A*7	Red
	A6CON-P520	33104-6300FL *5		φ1.4 to 2.0mm		Blue
One-touch connector plug for communication *2, *4	A6CON-L5P	35505-6000- B0M GF *5	Communication line 0.5mm ² (20 AWG)	φ2.2 to 3.0mm		Red
			Shielded cable 0.5mm ² (20 AWG)			
One-touch connector plug for power supply and FG *2, *4, *6	A6CON-PW5P	35505-6080-A00 GF *5	0.75mm ² (0.66 to 0.98mm ²) (18 AWG) Wire diameter: 0.16mm or more Insulating coating material: PVC (heat-resistant)	φ2.2 to 3.0mm	7A*7	Gray
	A6CON-PW5P- SOD	35505-6180-A00 GF *5		φ2.0 to 2.3mm		Blue
Online connector for communication *3	A6CON-LJ5P	35720-L200-B00 AK *5	—	—	—	—
Online connector for power supply and FG *3	A6CON-PWJ5P	35720-L200-A00 AK *5	—	—	—	—

*1 The A6CON-P□□□ (manufactured by Mitsubishi Electric) is available in packs of 20 pieces.

*2 The A6CON-□5P (manufactured by Mitsubishi Electric) is available in packs of 10 pieces.

*3 The A6CON-□J5P (manufactured by Mitsubishi Electric) is available in packs of 5 pieces.

*4 One-touch connector plugs can no longer be used once crimped.

*5 The manufacturer is 3M Japan Limited.

*6 Check the outside diameter of an applicable cable and select a connector.

*7 Keep the current within the allowable range of the connected cable.

7.2.2 Precautions for transition wiring of one-touch connector for power supply and FG

Current flows in the modules when they are transition wired through one-touch connectors for power supply and FG. Design the system so that the current flows in each module equals to or lower than the maximum rated current shown below.

No.	Power port	Connector	Maximum rated current
1)	Module power supply (IN)	One-touch connector for power supply and FG (No.2 and 3 pins of CONC)	7A * 1
2)	I/O power supply (IN)	One-touch connector for power supply and FG (No.4 and 5 pins of CONC)	7A * 1

No.	Power supply	Power port (source)	Description	Maximum current consumption
3)	Module power supply	Module power supply (IN)	Power supply for CC-Link modules	Module power supply
4)	Power supply for input device	I/O power supply (IN)	Power supply for input devices connected, such as sensors	Supply current for connected device
5)	Input current		Input signals from input devices	Rated input current
6)	External load power supply		Power supply that is consumed by the load	Maximum load current
7)	External power supply for output part		Power supply for output circuits	External power supply for output part current
8)	Module power supply (OUT)	Module power supply (IN)	Power supply for the modules and external devices connected by transition wiring	Depends on the modules and external devices connected
9)	I/O power supply (OUT)	I/O power supply (IN)	Power supply for the modules and external devices connected by transition wiring	

*1 The value of 1) equals to the sum of 3) and 8). The value of 2) equals to the sum of 4), 5), 6), 7), and 9). Design the system so that each value of 1) and 2) equals to or lower than the maximum rated current (7A).

7.2.3 Wiring procedures for the one-touch connector

This section describes the wiring procedures for the one-touch connector of the one-touch connector type or connector type compact remote I/O module.

- 1) Check the connector.

Check that a plug cover is attached to the plug.

Note: Do not press the plug cover firmly into the plug before a cable is inserted.

Once crimped, the plug can no longer be used.

- 2) Insert a cable. (*1)

Lift the end of the plug cover and insert a cable until it reaches the other end of the cover (within 1mm from the other end).

Failure to do so may cause an improper crimping.

Note: When inserting the cable, prevent the cable from sticking out from the plug cover end.

- 3) Set the plug cover.

After the cable is inserted, put down the plug cover and set it to the position where the metal contacts fit into the cover.

- 4) Crimp the plug cover into the plug.

Hold the center of the plug cover with pliers and press it vertically into the plug.

- 5) Press the latches into the plug.

After crimping, press the latches located at both ends of the plug cover into the plug.

Check that the cover is fixed to the plug with the latches.

- 6) Check that the plug cover is horizontally-embedded to the plug. Check also that the cover is not floating.

Note: As shown in the wrong example on the left, if the cover is not horizontally-embedded or the cover is floating, it may result in improper crimping.

Press the plug cover firmly into the plug with pliers. (Refer to the correct example.)

- 7) Check the crimped state from the top.

Check that there is no clearance between the plug and the cover.

Note: As shown in the wrong example on the left, if the latch is not securely engaged, clearance occurs between the plug and the cover.

Press the plug cover firmly into the plug with pliers. (Refer to the correct example.)

*1 When a cabtyre cable is used:

Strip the cable jacket 2cm or more.

If the wire lengths are not even, trim their ends with nippers to the same length.

7.2.4 Wiring procedures for the one-touch connector for communication

This section describes the wiring procedures for the one-touch connector for communication used for the connector type compact I/O module.

(To the next page)

1) Check the connector.

Check that a plug cover is attached to the plug.

Note: Do not press the plug cover firmly into the plug before a cable is inserted.

Once crimped, the plug can no longer be used.

2) Prepare a communication cable for connection.

Strip the cable jacket 3cm or more and perform the processing described on the left.

If the wire lengths are not even, trim their ends with nippers to the same length.

3) Insert a cable.

Lift the end of the plug cover and insert a cable until it reaches the other end of the cover (within 1mm from the other end).

Failure to do so may cause an improper crimping.

4) Set the plug cover.

After the cable is inserted, put down the plug cover and set it to the position where the metal contacts fit into the cover.

5) Crimp the plug cover into the plug.

Hold the center of the plug cover with pliers and press it vertically into the plug.

- 6) Press the latches into the plug.

After crimping, press the latches located at both ends of the plug cover into the plug.

Check that the cover is fixed to the plug with the latches.

- 7) Check the crimped state from the side.

Check that the plug cover is horizontally-embedded to the plug.

Check also that the floating part of the cover is within 0.2mm.

Note: As shown in the wrong example on the left, if the cover is not horizontally-embedded or the floating part is 0.2mm or more, it may result in improper crimping.

Press the plug cover firmly into the plug with pliers. (Refer to the correct example.)

Check that there is no clearance between the plug and the cover.

Note: As shown in the wrong example on the left, if the latch is not securely engaged, clearance occurs between the plug and the cover.

Press the plug cover firmly into the plug with pliers. (Refer to the correct example.)

7.2.5 Wiring procedures for the one-touch connector for power supply and FG

This section describes the wiring procedures for the one-touch connector used for power supply and FG of the connector type compact I/O module.

- 1) Check the connector.

Check that a plug cover is attached to the plug.

Note: Do not press the plug cover firmly into the plug before a cable is inserted.

Once crimped, the plug can no longer be used.

- 2) Insert a cable. (*1)

Lift the end of the plug cover and insert a cable until it reaches the other end of the cover (within 1mm from the other end).

Failure to do so may cause an improper crimping.

Note: Use cables applicable to the module.

- 3) Set the plug cover.

After the cable is inserted, put down the plug cover and set it to the position where the metal contacts fit into the cover.

- 4) Crimp the plug cover into the plug.

Hold the center of the plug cover with pliers and press it vertically into the plug.

- 5) Press the latches into the plug.

After crimping, press the latches located at both ends of the plug cover into the plug.

Check that the cover is fixed to the plug with the latches.

7.3 Handling of the Waterproof-type Remote I/O Module

7.3.1 List of dustproof and waterproof caps

The following table lists the model names of dustproof cap and waterproof cap applicable to the CC-Link system waterproof-type remote I/O module.

	Mitsubishi Electric product model name	Specifications
Dustproof cap *1	A6CAP-DC1	—
Waterproof cap *1	A6CAP-WP1	Protection of degree IP67

*1 A pack of A6CAP- □□1 (manufactured by Mitsubishi Electric) includes 20 pieces.

7.3.2 Waterproof plug attachment procedure

The attachment procedure for the waterproof plug supplied with the AJ65SBTW4-16□ is shown below. In order to prevent water leakage, attach a waterproof plug to the penetrating pipe for the transmission and module power-supply lines in the following way.

- 1) Remove the nut and bushing from the penetrating pipe attached to the module.

- 2) Insert the waterproof plug into the penetrating pipe and secure it by tightening the nut.

Tightening torque: 0.99 to 1.48N·m

7.3.3 Wiring procedure for the terminal block

This section describes the wiring procedure of a terminal block to the waterproof-type remote I/O module.

- 1) Remove the module front cover, and pass the cables through the through pipe for the transmission and module power-supply lines.

- 2) Open the module top cover and remove the terminal block, then perform wiring to the terminal block.

- 3) Secure the terminal block using screws, then fasten the module front and top covers using screws.

- 4) Tighten the nut* on the through pipe for the transmission and module power-supply lines.

**POINT**

- Always install a waterproof plug to the unused through pipe for the transmission and module power-supply lines. (Refer to Section 7.3.2.)
- When wiring the transmission and module power-supply lines, please take care not to apply force in excess of 0.39N·m excessive force to the wiring at the inlet.
- In the event of the ambient temperature exceeding 56 °C after wiring the unit, make sure to re-tighten the nuts.

7.4 Handling of the Low Profile Waterproof Type Remote I/O Module

7.4.1 List of waterproof caps

The model name of the waterproof cap applicable to the CC-Link system low profile waterproof type remote I/O module (AJ65FBTA□-16□) is shown below. The following table lists the model names of waterproof cap applicable to the CC-Link system low profile waterproof type remote I/O module (AJ65FBTA□-16□).

	Mitsubishi Electric Product Model Name	Use
Waterproof cap (20 pieces, Sold separately)	A6CAP-WP2	For LINK OUT connector and I/O connector

POINT

- The waterproof cap (A6CAP-WP1) cannot be used.

7.4.2 Waterproof cap installation method

The installation method for the waterproof caps packed with the product is shown below.

In order to prevent water penetration, install the waterproof caps on the unused Link Out side connectors and I/O connectors using the following method.

- 1) Insert the waterproof cap in the empty connector on the main module, then tighten it.

Tightening Torque Range: 0.29 to 0.34N·m

7.5 Connectors and Tools Used for Connecting the FCN Connector Cables

**WARNING**

- When connecting the connector cables by crimp-contact, pressure-displacement or soldering, make sure to use the tools listed in the table below. Attach the connectors securely to the module.

Three types of 40-pin connectors are available for the AJ65□BTCTF1-32□ and the AJ65□BTCTF1J-32□; they are soldering type, pressure-displacement type and crimp-contact type.

Please purchase the required 40-pin connector, and either pressure-displacement or crimp-contact type tool according to the listing below.

(1) Connector types

Type	Model name
Soldering type connector (Straight-out type)	A6CON1
Crimp-contact type connector (Straight-out type)	A6CON2
Pressure-displacement type connector (Flat cable type)	A6CON3
Soldering type connector (Straight-out/diagonal-out type)	A6CON4

(2) Crimp-contact and pressure-displacement type tools

Type	Model name	Cable size	Manufacturer
Crimp-contact tool	N363TT005H	28 to 24 AWG	OTAX CO., LTD.
Pressure-displacement tool	N367TT012H (locator plate) *1	-	

*1 Attach a locator plate using the commercially available hand press.

7.6 Attaching and Removing the Protective Cover for the Compact Remote I/O Module

Covering the front of CC-Link system compact remote I/O module with a protective cover can prevent the following accidents:

- Improper contact to the terminal block or connector.
- Module malfunction resulted from connector drop.

For the model name of the protective cover for the compact remote I/O module, see Section 1.5.

Follow the procedure illustrated below to mount the protective cover on the module.

(1) In the case of A6CVR-8/16/32

<How to mount>

Hook the top of the protective cover onto the top of the remote I/O module, then push the lower part of the cover toward the module until you hear a click sound.

<How to remove>

Place your thumb under the protective cover and pull it upwards.

(2) In the case of A6CVR-VCE8/16

<How to mount>

Confirm the orientation of the protective cover as shown in the diagram below.
Then, attach the cover straight to the module as shown by the arrow and push in securely until it stops.

Securely fix tabs of the protective cover to the groove of the module as shown below.

Note that the fixing tab positions vary with the protective cover used.

In the case of A6CVR-VCE16

In the case of A6CVR-VCE8

<How to remove>

Extend the width of protective cover slightly as shown by the arrow 1). Then, pull it out vertically from the module as shown by the arrow 2).

(3) In the case of A6CVR-VS16

<How to mount>

Attach the protective cover as shown below.

Attach the protective cover so that the online connector for communication on the module is opposite to the model name of the protective cover. Do not attach the cover in the direction other than that shown above.

Securely engage tabs of the protective cover with the grooves on the module as shown below.

Note that the locations of tabs vary depending on the protective cover used.

(Top part)

(Bottom part)

<How to remove>

Hold the both ends of the protective cover (top part) as shown below.
To disengage the tabs from the module, lift up the protective cover in the direction of arrow [1], and pull it in the direction of arrow [2].

Hold the both ends of the protective cover (bottom part), slightly push it down, and pull it in the direction of arrow [2] as you did for the top part of the cover.

<Precautions for installing the module>

Using the module with the A6CVR-VS16 (protective cover) attached requires a configuration where cables come out from both sides of the module. Therefore, in such a case, have enough spaces between the module and other structures or parts considering the bending radius of the cables used.

(1) Distance determined considering the bending radius of the cables

POINT

- (1) When attaching the protective cover, ensure the space of 50mm or more between the target module and the modules on the right and left sides. Also, ensure the space of 100mm or more over the upper part of the module, so that the cover can be pulled upward.

- (2) Fix the wiring with a clamp or similar parts. Failure to do so may apply force to the protective cover, resulting in it falling from the module. In addition, the wiring cable may be damaged.
- (3) When attaching a one-touch connector plug with terminating resistor (A6CON-TR11(N)) together with an online connector for communication (A6CON-LJ5P), follow the procedure provided below.

Failure to do so may cause the terminating resistor, protective cover and communication cable to interfere with each other.

- Tilt the terminating resistor toward 1) or 2) as shown in the diagram below, and then attach the protective cover.
- Connect the one-touch connector plug with terminating resistor to CON B.

7.7 Connection Method of CC-Link Dedicated Cable

This section describes how to connect the compact remote I/O module to the master module using CC-Link dedicated cables.

**WARNING**

- Shut off the external power supply (all phases) used in the system before wiring. Failure to do so may result in electric shock or damage to the product.
- After wiring, attach the included terminal cover to the module before turning it on for operation. Failure to do so may result in electric shock.
- Shut off the external power supply (all phases) used in the system before cleaning the module or retightening the terminal block screw. Failure to do so may cause the module to fail or malfunction.

**CAUTION**

- Do not install the control lines or communication cables together with the main circuit lines or power cables. Keep a distance of 100mm or more between them. Failure to do so may result in malfunction due to noise.
- Individually ground the FG terminal of the programmable controller with a ground resistance of 100Ω or less. Failure to do so may result in electric shock or malfunction.
- Tighten any unused terminal screws within the specified torque range (0.42 to 0.50N·m). Failure to do so may cause a short circuit due to contact with a solderless terminal.
- Use applicable solderless terminals and tighten them within the specified torque range. If any solderless spade terminal is used, it may be disconnected when the terminal screw comes loose, resulting in failure.
- Check the rated voltage and terminal layout before wiring to the module, and connect the cables correctly. Connecting a power supply with a different voltage rating or incorrect wiring may cause a fire or failure.
- Securely connect the cable connectors. Poor contact may cause malfunction.
- Place the cables in a duct or clamp them. If not, dangling cable may swing or inadvertently be pulled, resulting in damage to the module or cables or malfunction due to poor contact.
- Do not install the control lines or communication cables together with the main circuit lines or power cables. Failure to do so may result in malfunction due to noise.
- When disconnecting the cable from the module, do not pull the cable by the cable part. For the cable with connector, hold the connector part of the cable. For the cable without connector, loosen the screw first and remove it. Pulling the cable connected to the module may result in malfunction or damage to the module or cable.

(1) The following figure shows how to connect compact remote I/O modules to a master module.

[Simplified diagram]

*1 Connect a terminating resistor to the compact type remote I/O module used as a terminal station as shown below. (Terminating resistors are provided with a master module.)

*2 Use CC-Link dedicated cables in the CC-Link system.

Performance of the CC-Link system cannot be guaranteed if any cables other than the CC-Link dedicated cables are used.

For the specifications and any inquiries on the CC-Link dedicated cables, refer to the following:

CC-Link Partner Association Website: www.cc-link.org

POINT

Compact remote I/O modules with an input response of 0.2ms are more susceptible to noise interference than other modules. Keep the wiring of the I/O module away from power cables as much as possible.

(2) The following figure shows how to connect connector type remote I/O modules to a master module.

[Simplified diagram]

*1 When a connector type remote I/O module is used as a terminal station, connect a one-touch connector plug with terminating resistor (A6CON-TR11(N)).

*2 Use CC-Link dedicated cables in the CC-Link system.

Performance of the CC-Link system cannot be guaranteed if any cables other than the CC-Link dedicated cables are used.

For the specifications and any inquiries on the CC-Link dedicated cables, refer to the following:

CC-Link Partner Association Website: www.cc-link.org

POINT

Compact remote I/O modules with an input response of 0.2ms are more susceptible to noise interference than other modules. Keep the wiring of the I/O module away from power cables as much as possible.

(3) The following figure shows how to connect a one-touch connector and online connector to the remote I/O module.

POINT

- For a one-touch connector for communication, use Ver.1.10-compatible CC-Link dedicated cables (FANC-110SBH, FA-CBL200PSBH, or CS-110). Ver.1.10-compatible CC-Link dedicated cables other than those above, CC-Link dedicated cables, and CC-Link dedicated high-performance cables are not supported.
- To connect or remove a one-touch connector to/from an online connector, refer to the manual included with the online connector.

7.8 Handling of Spring Clamp Terminal Block Type Remote I/O Module

7.8.1 Installation and removal of the spring clamp terminal block

(1) Installing the spring clamp terminal block

How to install a 2-piece spring clamp terminal block is shown below. Secure the terminal block part using the following method. Incomplete installation may cause fall, short circuit or malfunction.

- 1) Push the spring clamp terminal block fixing tabs of the 2-piece terminal block in the arrow direction until a click can be heard.

- 2) Connect the connector (female) of the 2-piece terminal block to the connector (male) of the module body and press it until a click can be heard. Check that both of two fixing tabs are inserted completely.

- 3) Tighten the 2-piece terminal block fixing screws. (Tightening torque range: 0.34 to 0.46N·m)

(2) Removing the spring clamp terminal block

Remove the spring clamp terminal block in reverse order of the above installation procedure.

- 1) Loosen the 2-piece terminal block fixing screws.
- 2) Pull out the spring clamp terminal block fixing tabs.
- 3) Lift the 2-piece terminal block to remove it from the main body.

7.8.2 Procedure for wiring the spring clamp terminal block

This section describes the procedure for connecting a cable to the spring clamp terminal block remote I/O module.

(1) Precaution for connecting or disconnecting cables

- (a) When inserting two wires into the circular shaped hole of the spring clamp terminal block, use the TGWV TC1.25-T9 (manufactured by NICHIFU TERMINAL INDUSTRIES CO., LTD.). Inserting two or more wires without using the TGWV TC1.25-T9 may result in a poor contact to the spring clamp terminal part.
- (b) Strip the wire according to the specification. If the wire strip length is too long, the exposed conductive part may cause electric shock or short circuit. If the wire strip length is too short, it may result in a poor contact to the spring clamp terminal part.
- (c) When using a spring clamp terminal block tool, follow the instruction below. Failure to do so may cause damage of the spring clamp terminal part or the terminal block resin part.
 - Use a dedicated tool for a spring clamp terminal block.
 - Do not insert the wire or the bar solderless terminal before inserting the tool into the square shaped hole.
 - Insert the tool vertically into the hole.

(2) Connecting a cable

- (a) Insert the tool vertically all the way inside the square shaped hole of the remote I/O module.
- (b) Insert the wire or the bar solderless terminal into the circular shaped hole, and remove the tool from the hole.
- (c) Check that the wire or the bar solderless terminal is firmly clamped by pulling it lightly.

(3) Disconnecting a cable

- (a) Insert the tool vertically all the way inside the square shaped hole of the remote I/O module.
- (b) Pull the wire or the bar solderless terminal out of the hole.

(4) Recommended product list

Product name	Model name	Applicable wire size	Contact
Tool (dedicated to spring clamp terminal block)	KD-5339	—	Mitsubishi Electric System Service Co., Ltd.
Bar solderless terminal *1	TGV TC1.25-9T	0.3 to 1.65mm ²	NICHIFU TERMINAL INDUSTRIES CO., LTD.
	TGWV TC1.25-T9*2		
Dedicated bar solderless terminal tool	NH65A	—	
Bar solderless terminal *1	NF 0.5	0.5mm ²	NICHIFU TERMINAL INDUSTRIES CO., LTD.
	NF 0.75	0.75mm ²	
	NF 1	0.9 to 1.0mm ²	
	NF 1.5	1.25 to 1.5mm ²	
Dedicated bar solderless terminal tool	NH 79A	—	

*1 Use this product when doing the terminal treatment of the wire and inserting it into the spring clamp terminal block.

*2 Use this product when inserting two wires to one terminal.

7.9 Attaching Mounting Brackets to the Module

7.9.1 Attachment of mounting brackets

This section describes the procedures for directly installing the AJ65VBTS□-□□□ or AJ65VBTC□-□□□ to a control panel using mounting brackets and screws. If the module is not fixed securely, it can cause drop of the module, short circuit, or malfunction.

- (1) Align the projections of a mounting bracket with the corresponding slots of the module.

- (2) Obliquely insert the projections to the slots, and press down the mounting bracket in the direction of an arrow until it clicks.

- (3) Screw the mounting bracket to a control panel. (Tightening torque range: 0.82 to 1.11N·m)

7.9.2 Precautions for attaching mounting brackets

The mounting brackets can be attached differently depending on the modules.
Attach them to two positions.

- (1) AJ65VBTS□-16□ The mounting brackets can be attached as shown below (two different ways).

- (2) AJ65VBTS□-32□ The mounting brackets can be attached as shown below (only one way).

- (3) AJ65VTCE□-8□ The mounting brackets can be attached as shown below (two different ways).

(4) AJ65VBTCE□-16□, AJ65VBTCE□-32□

The mounting brackets can be attached as shown below (two different ways).

POINT

- Do not attach the mounting brackets in any ways other than those described above.

7.10 Mounting the DIN Rail Adapter

7.10.1 Specifications

The following table shows the specifications of the DIN rail adapter.

Item \ Model	A6DIN1C
Mountable module	AJ65DBTB1-32D, AJ65DBTB1-32T1, AJ65DBTB1-32R, AJ65DBTB1-32DT1, AJ65DBTB1-32DR
External dimensions	174mm × 68mm × 10mm
Weight	0.07kg
Applicable DIN rail type (compliant with IEC 60715 and JIS C 2812)	TH35-7.5Fe, TH35-7.5Al, TH35-15Fe

7.10.2 Handling precautions

(1) The DIN rail adapter is made from resin. Do not drop or apply strong shock to the adapter.

(2) Mounting pitch

When installing a DIN rail to a control panel, keep mounting pitches 200mm or less.

7.10.3 Attaching the DIN rail adapter to the module

Use two M4 screws (length: 10mm) to attach the DIN rail adapter to the AJ65DBTB1-32 □ type compact remote I/O module.

The tightening torque range is 0.78 to 1.18N•m.

7.10.4 Mounting the module to a DIN rail

This section describes how to mount/remove the module to/from a DIN rail.

(1) Mounting to a DIN rail

Mount the module with the DIN rail adapter attached to a DIN rail as follows.

- (a) Insert the groove for DIN rail adapter into the topside of the DIN rail.
- (b) Fix the module by pressing it against the DIN rail.

- (c) When multiple DIN rail adapters are installed on the DIN rail, even though the gaps among DIN rail adapters are filled, the spaces of 4mm are left among the modules.

(2) Removing the module from a DIN rail

Remove the module from a DIN rail as follows.

- (a) Pull the hook at the bottom of the DIN adapter downward with flathead screwdriver (6 × 100).
- (b) With the hook pulled out, pull the module forward and remove the module from the DIN rail.

7.11 Common Terminal Block

The L RUN may be flashing irregularly due to noise or a wiring failure. Check for noise effects or wiring failures.

8.2 Examples of Errors for Compact Remote I/O Modules

This section explains examples of errors that occur in the input circuit, and the appropriate corrective actions.

8.2.1 Errors occurring in the input circuit and corrective actions

Examples of errors that occur in the input circuit and corrective actions are explained below:

	Error status	Cause	Corrective action
Example 1	Input signals do not turn off.	<ul style="list-style-type: none"> Activation via the LED display switch. 	<ul style="list-style-type: none"> Connect an appropriate resistor as shown below so that the current flowing along the input module becomes lower than OFF current.  <p>* A calculation example used to obtain the resistance value to be connected is shown on the following page.</p>
Example 2	Input signals do not turn off.	<ul style="list-style-type: none"> Sneak current due to the use of two power supplies 	<ul style="list-style-type: none"> Use only one power supply. Connect a diode to prevent a sneak current as shown below. 
Example 3	Input signals do not turn off.	<ul style="list-style-type: none"> Input switch leakage current (driving with a contactless switch). 	<ul style="list-style-type: none"> Connect the appropriate resistor so that the terminal-to-terminal voltage of the input module is below the OFF voltage value.  <p>0.1 to 0.47μF + 47 to 120Ω (1/2W) is recommended for the CR constant.</p>
Example 4	Input signals do not turn off.	<ul style="list-style-type: none"> Driving using a limit switch with neon lamp. 	<ul style="list-style-type: none"> Same as Example 3. Or, create a completely separate display circuit.
Example 5	Input signals do not turn off.	<ul style="list-style-type: none"> Leakage current due to line capacity of the wiring cable. <p>The line capacity "C" of a twisted pair wire is about C=100PF/m.</p> 	<ul style="list-style-type: none"> Same as Example 3. However, this problem will not occur if the power supply as shown below is provided at the input device side. 

<Sample calculation for Example 1>

When a switch with LED indicator, giving leakage current of 3mA at maximum when 24VDC power is supplied to the AJ65SBTB1-16D

- (1) 1.7mA or less OFF current of the AJ65SBTB1-16D is not satisfied. Hence, connect a resistor as shown below.

- (2) Calculate the resistance value R as shown below.

To satisfy 1.7mA or less OFF current of the AJ65SBTB1-16D, connect a resistor which flows 1.3mA or more.

IR: $I_Z = Z$ (Input impedance): R

$$R \leq \frac{I_Z}{I_R} \times Z \text{ (Input impedance)} = \frac{1.7}{1.3} \times 3.3 = 4.31 [\text{k}\Omega]$$

Supposing that the resistance R is 3.9kΩ, the power capacity W of resistor R is:
 $W = (\text{Input voltage})^2 \div R = 26.42 \div 3900 = 0.179 \text{ (W)}$

- (3) Connect a resistor of 3.9 (kΩ) and 1 to 2 (W) to a terminal which may cause an error, since the power capacity of a resistor is selected so that it will be 3 to 5 times greater than the actual power consumption.
- (4) Also, OFF voltage when resistor R is connected will be as follows.

$$\frac{1}{\frac{1}{3.9 [\text{k}\Omega]} + \frac{1}{3.3 [\text{k}\Omega]}} \times 3 [\text{mA}] = 5.36 [\text{V}]$$

This satisfies 6V or less OFF voltage of AJ65SBTB1-16D.

8.2.2 Errors occurring in the output circuit and corrective action

Examples of errors that may occur in the output circuit and the respective corrective action are described below.

(1) When AJ65SBTB1-16T or AJ65SBTB1-32T is used

	Condition	Cause	Corrective action
Example 1	<p>When an LED is connected as a load, sometimes the LED dimly lights up even when the output module is turned off.</p> <p>(Example) LED push button manufactured by IDEC CORPORATION: ALFN22211DNR</p> 	<p>For the output modules listed below, the output module specification and the leak current specification value during OFF are 24VDC 0.5A and 0.25mA, respectively (the leak current during OFF is specified as above since an MOS with a built-in protection function and PET transistor output are used.)</p> <p><Applicable modules> AJ65SBTB1-16T, AJ65SBTB1-32T</p>	<p>Connect a resistor with 5 to 50kΩ in parallel to the load LED.</p>
Example 2	<p>When a segment LED display device is connected as a load, the display contents sometimes become incorrect.</p> <p>(Example) M7E digital display unit (height of character 14mm) by Omron, Co.: M7E-01DBN2</p> 	<p><Applicable modules> AJ65SBTB1-16T, AJ65SBTB1-32T</p>	<p>Connect a pull-up resistor with 5 to 50kΩ and 0.5(W) between the 24VDC power supply and the output module output.</p>

(2) When AJ65SBTB2(N)-8S or AJ65SBTB2(N)-16S is used

	Condition	Cause	Corrective action
Example 1	Excessive voltage is applied to the output OFF load.	<ul style="list-style-type: none"> The load is half-wave rectified internally. (Some solenoids do this process.)  <ul style="list-style-type: none"> When the polarity of the power supply is [1], C is charging. When the polarity is [2], the voltage charged in C + power supply voltage is applied to both ends of D1. The maximum value of the voltage is about 2.2E. 	<ul style="list-style-type: none"> Connect a resistor of several tens KΩ to several hundreds KΩ to both ends of the load. <p>When this type of method is used, no problems will occur in the output elements, but the diode that is built in the load may deteriorate and may be damaged.</p> 
Example 2	The load is not turned OFF. (Triac output)	<ul style="list-style-type: none"> Leakage current due to built-in surge suppressor. 	<ul style="list-style-type: none"> Connect a resistor to both ends of the load. <p>Caution is required when the wiring distance from the output card to the load is long, since there may be leakage current due to the line capacity.</p> 
Example 3	Time limit changes when the load is a CR type timer. (Triac output)		<ul style="list-style-type: none"> Drive the relay first, and then drive the CR type timer at that contact. <p>Caution is required as indicated in Example 1 since the internal circuit may be half-wave rectified depending on the timer.</p>  <p>Calculate the resistor constant according to the load.</p>

	Condition	Cause	Corrective action
Example 4	The load is not turned OFF. (Triac output)	<ul style="list-style-type: none"> If the load current is insufficient (lower than 25mA), the triac does not operate, causing the load current to flow into a phototriac as shown below. If an inductive load is connected in this condition, the load may not turn off because surge at the time of off is applied to the phototriac. 	<ul style="list-style-type: none"> Connect a resistor to both ends of a load so that the load current is higher than the minimum load current. 

- (3) When AJ65AJ65SBTB1-8T, AJ65SBTB2-8T, AJ65SBTB1-16T, AJ65SBTB2-16T, AJ65SBTB1-32T, AJ65SBTC1-32T, AJ65SBTB32-8DT, AJ65SBTB1-16DT, AJ65SBTB1-16DT1, AJ65SBTB32-16DT, AJ65SBTB1-32DT, AJ65SBTB1-32DT1, AJ65SBTC4-16DT, AJ65SBTC1-32DT, AJ65SBTC1-32DT1, or AJ65SBTW4-16DT is used

	Condition	Cause	Corrective action
Example 1	The load does not turn Off.	<p>When the load built into the capacitor is connected to the external load, a resonance may occur due to the inductor of the wiring and the load of the capacitor. This may lead to reverse current in output transistor. Due to the reverse current, the protection circuit for output transistor might operate, and the outputs might not be turned on.</p> <p>Note: Such as SSR (Solid state relay) may incorporate a capacitor for countermeasures against noise, etc. When the situation above occurs, confirm if a capacitor is incorporated to the manufacturer.</p>	<ul style="list-style-type: none"> Install fast recovery diode (1A, 100V or more) in series with the external load.

(4) When output module, combined module is used

	Condition	Cause	Corrective action
Example 1	When the external power supply turns on, the load turns on for a moment.	<p>Erroneous output due to the stray capacitance (C) between collector and emitter of photocoupler.</p> <div><p>There is no erroneous output at normal load. An erroneous output may occur at high sensitivity load (such as solid state relay)</p></div>  <p>(1) If the external power supply is turned on precipitously, Ic current flows due to the stray capacitance (C) between collector and emitter of photocoupler.</p> <p>(2) Ic current flows to the next stage of transistor Tr1 gate and Y0 output turns on by 100μs</p> 	<p>(1) When the external power turns ON/OFF, check that the external power supply rising edge must be 10ms or more, and switch the SW1 to the primary side of external power supply.</p>  <p>(2) When switching to the secondary side of the external power supply is required, the external power supply rising edge connected a condenser must be slow, and measured 10ms or more.</p> <p>Sink output</p>  <p>Source output</p>  <p>* The measures are ineffective in the following modules due to the characteristic of the external power supply circuit</p> <ul style="list-style-type: none">• AJ65SBTB1-8TE• AJ65SBTB1-16TE <p>R1: Several tens of ohms</p> <p>Power capacity $\geq (\text{external power supply current}^{*1})^2 \times \text{resistance value} \times (3 \text{ to } 5)^2$</p> <p>C1: several hundreds of microfarads 50V</p> <p>*1 Refer to consumption current of the external power supply for modules used in this manual.</p> <p>*2 Select the power capacity of resistance to be 3 to 5 times larger than the actual power consumption.</p> <p>(Example) R1=40 Ω, C1=300 μF Use the below expression to calculated a time constant $C1 \times R1 = 300 \times 10^{-6} \times 40$ $= 12 \times 10^{-3} \text{s}$ $= 12 \text{ms}$</p>

	Condition	Cause	Corrective action
Example 2	The load which was turned OFF is turned ON for a moment at power-off. (Transistor output)	<p>The load [2] which was turned OFF may be turned ON due to back electromotive force at the time of power-off [1] if an inductive load is used.</p> 	<p>Take action in the following (1) or (2).</p> <p>(1) To prevent the generation of the back electromotive force, connect diode in parallel with load where the back electromotive force has been generated.</p> <p>Source output [3]</p>  <p>Sink output [3]</p>  <p>(2) Install a diode between the positive and negative external power supply to allow an electric current to pass another current path.</p> <p>When the corrective action shown in the example 1 is taken simultaneously, the diode must be installed in parallel with the C1 and R1.</p>  <p>Example 1</p> <p>* The measures are ineffective in the following modules due to the characteristic of the external power supply circuit</p> <ul style="list-style-type: none">• AJ65SBTB1-8TE• AJ65SBTB1-16TE  <p>Example 1</p> <p>D1: Reverse voltage VR (VRM)...*1, Forward current IF (IFM)...*2</p> <p>*1 Approximately 10times higher than the rated voltage in the specifications Example: 24VDC→Approximately 200V</p> <p>*2 More than twice as much as the maximum load current (common) in the specifications Example: 2A/1 common→4A or more</p>

	Condition	Cause	Corrective action
Example 3	The load operates due to powering on the external power supply. (transistor output)	<p>The polarity of the external power supply is connected in reverse.</p>  <p>When the polarity is connected in reverse, current may flow across an output element protection diode.</p>	Connect the polarity correctly.
Example 4	When an output is turned on, a load connected to the other output is also turned on. (transistor output (source type))	<p>If the wire connecting 0V of an external power supply and a common of a load is cut off or disconnected, the load connected to Y1 is also turned on due to a parasitic circuit of the output element that is off.</p>  <p>If a current keeps flowing under the above condition, a failure may occur.</p>	<p>Connect the external power supply and loads correctly. To prevent the condition described on the left, connect a diode to each output terminal as shown below.</p>

Appendix 2 CC-Link Versions

There are two versions for CC-Link: Ver.1.00 and Ver.1.10.

(1) Difference between Ver.1.00 and Ver.1.10

The original CC-Link version is Ver.1.00 and there are restrictions on the station-to-station cable length. The improved version is Ver.1.10 and there is no restriction on the station-to-station cable length (20cm or longer, in any case).

For the maximum overall cable distance of Ver.1.10, refer to the user's manual for the master/local module used.

To enable the station-to-station cable length of 20cm or longer, the following conditions must be met.

- All modules connected in the CC-Link system are Ver.1.10-compatible modules.
- Ver.1.10-compatible CC-Link dedicated cables are used in the entire system.

POINT
In a system where both Ver.1.00- and Ver.1.10-compatible CC-Link modules are connected, the specifications of Ver.1.00-compatible module are applied for the maximum overall cable distance and station-to-station cable length. For the maximum overall cable distance and station-to-station cable length of Ver.1.00, refer to the user's manual for the master/local module used.

(2) Checking a version

Ver.1.10-compatible modules have a "CC-Link" logo on the front of the module or on the rating plate.

WARRANTY

Please confirm the following product warranty details before using this product.

1. Gratis Warranty Term and Gratis Warranty Range

If any faults or defects (hereinafter "Failure") found to be the responsibility of Mitsubishi occurs during use of the product within the gratis warranty term, the product shall be repaired at no cost via the sales representative or Mitsubishi Service Company.

However, if repairs are required onsite at domestic or overseas location, expenses to send an engineer will be solely at the customer's discretion. Mitsubishi shall not be held responsible for any re-commissioning, maintenance, or testing on-site that involves replacement of the failed module.

[Gratis Warranty Term]

The gratis warranty term of the product shall be for one year after the date of purchase or delivery to a designated place. Note that after manufacture and shipment from Mitsubishi, the maximum distribution period shall be six (6) months, and the longest gratis warranty term after manufacturing shall be eighteen (18) months. The gratis warranty term of repair parts shall not exceed the gratis warranty term before repairs.

[Gratis Warranty Range]

- (1) The range shall be limited to normal use within the usage state, usage methods and usage environment, etc., which follow the conditions and precautions, etc., given in the instruction manual, user's manual and caution labels on the product.
- (2) Even within the gratis warranty term, repairs shall be charged for in the following cases.
 1. Failure occurring from inappropriate storage or handling, carelessness or negligence by the user. Failure caused by the user's hardware or software design.
 2. Failure caused by unapproved modifications, etc., to the product by the user.
 3. When the Mitsubishi product is assembled into a user's device, Failure that could have been avoided if functions or structures, judged as necessary in the legal safety measures the user's device is subject to or as necessary by industry standards, had been provided.
 4. Failure that could have been avoided if consumable parts (battery, backlight, fuse, etc.) designated in the instruction manual had been correctly serviced or replaced.
 5. Failure caused by external irresistible forces such as fires or abnormal voltages, and Failure caused by force majeure such as earthquakes, lightning, wind and water damage.
 6. Failure caused by reasons unpredictable by scientific technology standards at time of shipment from Mitsubishi.
 7. Any other failure found not to be the responsibility of Mitsubishi or that admitted not to be so by the user.

2. Onerous repair term after discontinuation of production

- (1) Mitsubishi shall accept onerous product repairs for seven (7) years after production of the product is discontinued. Discontinuation of production shall be notified with Mitsubishi Technical Bulletins, etc.
- (2) Product supply (including repair parts) is not available after production is discontinued.

3. Overseas service

Overseas, repairs shall be accepted by Mitsubishi's local overseas FA Center. Note that the repair conditions at each FA Center may differ.

4. Exclusion of loss in opportunity and secondary loss from warranty liability

Regardless of the gratis warranty term, Mitsubishi shall not be liable for compensation to:

- (1) Damages caused by any cause found not to be the responsibility of Mitsubishi.
- (2) Loss in opportunity, lost profits incurred to the user by Failures of Mitsubishi products.
- (3) Special damages and secondary damages whether foreseeable or not, compensation for accidents, and compensation for damages to products other than Mitsubishi products.
- (4) Replacement by the user, maintenance of on-site equipment, start-up test run and other tasks.

5. Changes in product specifications

The specifications given in the catalogs, manuals or technical documents are subject to change without prior notice.
